**TITLE:**           **Confirmation of Minutes – 5 December 2017**  
**To:**               Coordinating Executive Group, 6 March 2018  
**From:**           Tegan Capp, Civil Defence Emergency Management Secretary  
**Date:**           26 February 2018

---

### **Executive summary**

The purpose of this report is to present the unconfirmed minutes of the CDEM Coordinating Executive Group meeting held on 5 December 2017 (**attached**) for confirmation as a true and correct record.

---

### **Background**

Councils are required to keep minutes of proceedings in accordance with the Local Government Act 2002.

---

### **Attachments**

- Attachment 1.0a: *Minutes – CDEM Coordinating Executive Group, 5 December 2017*

---

### **Authorised by:**

**Name:**           Graeme MacDonald  
**Title:**            CDEM Manager  
**Date:**           26 February 2018

## **Northland CDEM Coordinating Executive Group**

---

Minutes of the Northland CDEM Coordinating Executive Group Meeting,  
held in the Council Chambers, Northland Regional Council,  
36 Water Street, Whangārei, on  
Tuesday, 5 December 2017 commencing at 9.30 am

---

### **Present:**

**Northland Regional Council** – Mr T Phipps (Chair)  
**Northland Regional Council** – Mr G MacDonald  
**Whangarei District Council** – Ms S Boardman  
**Kaipara District Council** – Mr J Burt  
**New Zealand Police** – Inspector M Ruth  
**Fire & Emergency New Zealand** – Mr G Quensell  
**Northland District Health Board** – Ms S Hoyle  
**Northland District Health Board** – Dr J Ortega  
**Ministry of Civil Defence and Emergency Management** - Ms B Vercoe  
**Northland Lifelines Group** – Mr S Weston  
**Welfare Coordination Group Chair** – Mrs Claire Nyberg

### **Also Present:**

**Northland Regional Council** – Ms T Capp (minutes)  
**Northland Regional Council** – Ms S Morgan  
**Northland Regional Council** – Mr M Soljak  
**Northland Regional Council** – Ms K Abbott  
**Northland Regional Council** – Ms S Botting  
**Kaipara District Council** – Ms S Douglas  
**Far North District Council** – Mr B Hutchinson  
**Far North District Council** – Cr C Kitchen (arrived 9.52am)  
**Whangarei District Council** – Ms V Randall  
**NZ Army** – Major R Wilkinson

### **Apologies**

#### **Moved (Phipps/Burt)**

That the apologies from Andy Finch, Russell Watson and Wipari Henwood for non-attendance be received.

**Carried**

### **Declaration of Conflict of Interest**

There were no declarations of conflicts of interest in any items of business.

## **1.0 Confirmation of Minutes- 5 September 2017**

**A1006594**

#### **Moved (Phipps/Weston)**

1. That the minutes of the Northland Coordinating Executive Group meeting, held 5 September 2017 be confirmed as a true and correct record.

**Carried**

## **1.1 Northland CDEM Coordinating Executive Group Agenda– Items for Information and Discussion A978678**

### **Moved (Burt/Phipps)**

That the reports as listed ***be received***:

1. That the minutes of the Northland Coordinating Executive Group meeting, held 5 September 2017 be confirmed as a true and correct record.
2. 'Members of the CEG/CDEM Group and key appointments' by Tony Phipps, CEG Chair, dated 10 November 2017.
3. 'Ministry of Civil Defence & Emergency Management monthly update Graeme MacDonald, Civil Defence Emergency Management Manager dated 22 November 2017.
4. 'Coordinating Executive Group Chairpersons Report' by Tony Phipps, CEG Chairperson, dated 24 November 2017.
5. The 'Report on the Northland Civil Defence Emergency Management Group Section 17A Local Government Act review' by Graeme MacDonald, CDEM Manager, dated 18 November 2017.
6. 'Rangitaiki River Scheme Review – April 2017 Flood Event Recommendations' by Graeme MacDonald, CDEM Manager, dated 18 November 2017.
7. 'Community Resilience Projects' by Shona Morgan, Community Resilience Coordinator, dated 14 November 2017.
8. 'Professional Development and Training' by Kim Abbott- Emergency Management Officer, dated 13 November 2017.
9. 'Public Information Management (PIM) Update' by Murray Soljak, Public Information Manager and Susan Botting, Public Information Officer and dated 16 November 2017.
10. 'Northland Lifelines Group Update' by Kim Abbott, CDEM Officer, dated 16<sup>th</sup> November 2017.
11. 'Northland Tsunami Siren Testing Outcome Report September 2017' by Sharon Douglas, CDEM Officer, Kaipara District, dated 18 November 2017.
12. 'Welfare Coordination Group update' by Claire Nyberg- Civil Defence Emergency Management Officer, dated 16 November 2017.
13. 'Kaipara District Update' by Sharon Douglas, Civil Defence Emergency Management Officer, dated 17 November 2017.
14. 'Far North District Update' by Bill Hutchinson, Civil Defence Team Leader, dated 13 November 2017.
15. 'Whangarei District Update' by Victoria Randall, Civil Defence Officer, Whangarei District and dated 13 November 2017.

**Carried**

## **Secretarial Notes and Actions**

### **Item 2.0: Members of the CEG/CDEM Group and Key Appointments**

*Dr Jose Benito Ortega replaces Dr Virginia McLaughlin as the new Medical Officer of Health.*

*Ken Ross is still appointed as a Local Controller for the Far North District.*

### **Item 12.0: Welfare Coordination Group Update**

*Note a correction in the second paragraph of the report on Page 67 of the agenda, should be Manaia PHO not Manaia PHU.*

### **Item 13.0: Kaipara District Update**

*The chairman has requested that Sharon Douglas and John Burt provide a presentation outlining the learnings from the Aranga response.*

## **Meetings for 2018**

The next meetings for the year ahead have been set down as follows:

9.30am Tuesday 6 March 2018  
9.30am Tuesday 19 June 2018  
9.30am Tuesday 4 September 2018  
9.30am Tuesday 4 December 2018

## **Conclusion**

The meeting closed at 11.00am.

**TITLE: Northland CDEM Coordinating Executive Group Agenda –  
Items for Information and Discussion**

**To:** Coordinating Executive Group Meeting, 6 March 2018

**From:** Graeme MacDonald, CDEM Manager

**Date:** 26 February 2018

---

**Executive summary**

Items for the Coordinating Executive Group provided for information and discussion purposes are attached and are summarised below:

**Administrative**

**1.0** Confirmation of Minutes – 5 December 2017

**National**

**2.0** Appointments Report

**3.0** MCDEM Update

**Group**

**4.0** Ministerial Review

**5.0** CEG Chairs Report

**6.0** Review of Membership

**7.0** Road Network Status Reporting During an Emergency Event & Recovery

**8.0** Community Response Groups Reports

**9.0** Professional Development

**10.0** PIM Report

**11.0** Welfare Report

**Operational and Exercises**

**12.0** Kaipara District Council Update

**13.0** Far North District Council Update

**14.0** Whangarei District Council Update

---

**Recommendations**

That the reports as listed ***be received:***

1. That the minutes of the Northland Coordinating Executive Group meeting, held 5 December 2017 be confirmed as a true and correct record.
2. That the report 'Members of the CEG/CDEM Group and key appointments' by Tony Phipps, CEG Chairman, dated 20 February 2018 received.

**ITEM: 1.1**

Page 2 of 2

3. That the report 'Ministry of Civil Defence & Emergency Management monthly update, by Graeme MacDonald, Civil Defence Emergency Management Manager, dated 23 February 2017 be received.
4. That the report 'Ministerial Review – Better responses to Natural Disasters and other Emergencies 17 November 2017', by Graeme MacDonald, CDEM Manager and dated 19 February 2018, be received.
5. That the report 'Coordinating Executive Group Chairpersons Report' by Tony Phipps, CEG Chairperson, dated 20 February 2018 be received.
6. That the report Review 'CDEM Group Membership' by Graeme MacDonald, CDEM Manager and dated 19 February 2018, be received.
7. That the report 'Road Network Status Reporting During an Emergency Event and Recovery' by Claire Nyberg, CDEM Officer and dated 22 February 2018, be received.
8. That the report 'Community Resilience Projects' by Shona Morgan, Community Resilience Coordinator and dated 20 February 2018 be received.
9. That the report 'Professional Development and Training' by Kim Abbott-Emergency Management Officer, dated 23 February 2018 be received.
10. That the report 'Public Information Management (PIM) update' by Murray Soljak, Public Information Manager and Susan Botting, Public Information Officer and dated 22 February 2018 be received.
11. That the report 'Welfare Coordination Group update' by Claire Nyberg- Civil Defence Emergency Management Officer, dated 22 February be received
12. That the report 'Kaipara District Update' by Sharon Douglas, Civil Defence Emergency Management Officer, dated 16 February 2018 be received.
13. That the report 'Far North District Update' by Bill Hutchinson, Civil Defence Team Leader, dated 21 February 2018 be received.
14. That the report 'Whangārei District Update' by Victoria Randall, CDEM Officer, Whangārei District, dated 19 February 2018 be received

---

**Considerations**

*1. Policy and Legislative Compliance*

The activities detailed in this report are in accordance with the Civil Defence Emergency Management Act 2002 and Northland CDEM Group Plan 2016.

---

**Authorised by Group Manager**

**Name:** Tony Phipps

**Title:** Group Manager – Customer Service and Community Resilience

**Date:** 26 February 2018

**TITLE: Members of the CDEM Group, CEG and Key Appointments**

**To:** Coordinating Executive Group, 6 March 2018

**From:** Tony Phipps, CEG Chairman

**Date:** 20 February 2018

---

**Executive summary**

Attached is the up to date list of members and key appointments for the Northland CDEM Group. The list of key appointments is also available on the same webpage as the Northland CDEM Group plan. The list has also been referenced in the group plan.

---

**Recommendations**

1. That the report 'Members of the CEG/CDEM Group and key appointments' by Tony Phipps, CEG Chairman, dated 20 February 2018 received.
2. That the Northland CDEM Group approves the appointment of as Local Controllers, pursuant to section 27, Civil Defence Emergency Management Act 2002.

---

**Report**

**Membership of the Northland Civil Defence Emergency Management Group:**

- Cr Rick Stolwerk (NRC)
- Mayor Mai (WDC)
- Cr Colin Kitchen (FNDC) – Chairperson
- Cr Jonathan Larsen (KDC)
- Mr B Mosby (Fire and Emergency NZ)
- Superintendent Russell Le Prou (NZ Police)
- Ms Bridget Vercoe (MCDEM) in observer role

**Membership of the Coordinating Executive Group:**

- Mr Andy Finch (FNDC)
- Mr Tony Phipps (NRC)
- Ms Sandra Boardman (WDC)
- Mr John Burt (KDC)
- Inspector Martyn Ruth (NZ Police)
- Mr Graeme Quensell (Fire and Emergency NZ)
- Ms Sarah Hoyle (Northland Health)
- Mr Ben Lockie (St John Ambulance)
- Ms Bridget Vercoe (MCDEM) in observer role

**ITEM: 2.0**

Page 2 of 3

- Dr Jose Ortega-Benito (Medical Officer of Health)
- Mr Russell Watson (Northland Lifelines Group)
- Mrs Claire Nyberg (Northland Welfare Advisory Group)

**Group Controllers:**

- Graeme MacDonald
- Tony Phipps
- Claire Nyberg

**Local Controllers of the Whangarei District:**

- Simon Weston
- Victoria Randall
- Andrew Venmore
- Sandra Boardman
- Sue Hodge

**Local Controller for the Kaipara District:**

- John Burt

**Local Controllers for the Far North District:**

- Alistair Wells
- Andrew Bonica

**Group Welfare Managers:**

- Claire Nyberg
- Kim Abbott
- Shona Morgan

**Local Welfare Managers:**

- Raewyn Smythe (FNDC)
- Kylie Cox (FNDC)
- Aya Morris (FNDC)
- Paula Ulrich (WDC)
- Cindy Velthuisen (WDC)
- Darlene Lang (KDC)
- Michelle Nepia (KDC)

**Group Recovery Manager:**

- Graeme MacDonald
- Steve McDowell (on contract)

**Local Recovery Managers**

- Janice Smith (FNDC)
- John Burt (KDC)
- Vacant (WDC)

### **Controller appointment**

The Kaipara District Council (KDC) has a vacancy for Local Controller. Dean Nuralli is recommended for the position of local controller for the KDC. Dean is currently employed as Regulatory Manager. Dean completed CIMS 4 refresher training in 2016. He has attended in house training exercises at Kaipara District Council. Dean comes with practical response experience having worked during the Somerset Floods in the United Kingdom in 2014. Whilst employed by Sedgemoor District Council as an environment protection manager, Dean assisted with the operational welfare response. Dean also had practical experience during Cyclone Bola in 1988. Dean intends to complete the Controllers development programme.

Appointment as local controller, pursuant to Section 27 (1) of the Civil Defence Emergency Management Act 2002 is recommended.

28 February 2018

Ref: 4026667

Dear CEG Chairs,

In amongst the most glorious summer weather, it's been an eventful start to the year with Ex-Tropical Cyclones Fehi and Gita as well as other storms and severe weather.

Minister Faafoi and I have visited a number of areas affected by the ex-tropical cyclone (ex-TC) Fehi and Gita over recent weeks. Minister O'Connor joined Minister Faafoi and I for the visit to Nelson Tasman, Golden Bay (to drop off medical supplies) and the West Coast last Wednesday. Minister Faafoi and I also visited New Plymouth last Friday. Overall my impression is of the collaborative effort across affected CDEM Groups and partner agencies, along with our broadcasters who have been proactive and consistent in using our public safety messages ahead of ex-TC Gita's arrival and during the response effort. We saw New Zealanders listen to our advice and take action to keep themselves and their families safe.

The Emergency Mobile Alert system has been used three times since its launch and test last November. To date it has been used to alert residents in Bell Block (Taranaki) of an ammonia gas leak, and more recently during ex-TC Gita. The first message for Ex-TC Gita alerted Buller residents to remain indoors as ferocious winds had created a serious danger with flying debris. The second was issued to alert people in New Plymouth to boil their water due to the interruption of the treated water supply to many parts of the city and nearby eastern communities.

The recovery effort is now underway and some of our communities and families within those areas will need support and access to information and will continue to rely on your staff and partner agencies to support them in coming weeks and months. Can you please pass on my thanks to everyone involved in the response and those that are now contributing to the recovery effort.

In January, I visited the Chatham Islands for my first visit since I was appointed Director. Whilst I have met in Wellington with Mayor Alf Preece, CE Owen Pickles and Group Manager Rana Solomon a number of times, this was my first visit to them. Every time I have attempted to visit, we have been affected by an emergency and after the Alaskan earthquake the day prior to this visit, I was seriously beginning to wonder whether I was actually going to make it! Peter Cameron and I did make it and it was a great trip – many thanks to Alf, Owen and Rana for their time and for providing me with insights into some of the practical challenges but also opportunities experienced by those living on the Chathams Islands.

Minister Faafoi, assisted by LGNZ, has been meeting with groups of Mayors, Regional Council Chairs, Councillors and local authority Chief Executives over late January and February to discuss the findings and recommendations of the Technical Advisory Group's report on the

Ministerial Review on Better Responses to Natural Disasters and Other Emergencies. The report was publicly released on 18 January.

A team in the Department of the Prime Minister and Cabinet are working on the Government's response to the TAG's recommendations. LGNZ is helping to facilitate nominations of people with expertise in local government and CDEM governance, planning, funding and operations to working groups to assist in developing and testing policy proposals. The Minister will meet with CDEM Group Managers on 19 March and the team will hold a workshop with them on 20 March. If you have any questions about the Ministerial review process please contact the project team lead Clare Ward on 04 912 0539 or [clare.ward@dpmc.govt.nz](mailto:clare.ward@dpmc.govt.nz).

At the CEG Chairs meeting on 06 December, you may remember we discussed NZ Response Teams. It was agreed that in February 2018, MCDEM would host a meeting with Fire and Emergency NZ and Police with the CDEM Groups Managers (as agreed by participants) from Auckland, BOP, Canterbury and Wellington to explore options and processes for reviewing the functions and arrangements for NZRTs. It has proven difficult to find a date in February that suited everyone and we now have a meeting locked in for 21 March. I'll provide an update in the March CEG Chairs letter following the meeting.

Registrations are now open for the 2018 National Emergency Management Conference, including the awards dinner. Further details about the Conference are in the summary of progress.

With the opening of the Conference registrations it's a timely reminder to be thinking of nominating individuals, groups, or organisations for the CDEM Awards to recognise their outstanding contribution. There are three types of award:

For contributions to CDEM in New Zealand:

- CDEM Gold Award: for outstanding contributions to CDEM in New Zealand.
- CDEM Silver Award: for important contributions to CDEM in New Zealand.

For innovation:

- Director's Award for Innovation: for exceptional innovation or creativity that has pushed the boundaries of current CDEM practice in New Zealand.

For long service:

- CDEM Long Service Award: for 10 years', 20 years', 30 years', 40 years' or 50 years' service (the 40 & 50 years' awards are new this year) to CDEM at the local or national level. (Note, only the 20 years and above awards are presented at Conference).

This is our chance to recognise both paid staff and volunteers. Nomination forms are available on the CDEM Awards page of the CDEM Sector tab on the MCDEM website. Nominations for awards to be presented at this year's Awards dinner were due to close on 02 March, however I've extended this date due to the responses to ex-TC Fehi and Gita. Please ensure nominations are in by 5pm on 15 March 2018.

## **Summary of Progress**

### ***Recovery after the 14 November 2016 earthquakes & tsunami***

The reopening of SH1 on 15 December last year, linking Picton with Christchurch again for the first time since 14 November 2016, has had a very positive impact on the Kaikōura community. Although areas of the road are still under construction with stop/go signs and stretches of unsealed road, tourists and locals have embraced using the road again. The psychological and economic impacts in Kaikōura are already evident, and tourists are filling the town.

The Government is supporting Kaikōura, Hurunui and Marlborough in their focus on the repair of damaged wastewater, fresh water and storm water infrastructure. The Ministers of Civil Defence and Finance have just approved Kaikōura's first drawdown from a special fund to assist with improving the resilience and capacity of the three water's assets in the district: \$676,000 to replace damaged urban water reservoirs and incoming pipes.

We continue to monitor, coordinate and champion the local recovery, including temporary accommodation and psychosocial support, as needed. The Ministry of Business, Innovation and Employment has begun the construction of a temporary accommodation village in Kaikōura, to house seven families at any one time while their homes are repaired.

**Contact:** Jenna Rogers, MCDEM Manager on 021 924 181 or [jenna.rogers@dpmc.govt.nz](mailto:jenna.rogers@dpmc.govt.nz).

### ***Whakatāne***

MCDEM is continuing to support the Local Recovery Office and central and local government agencies as they help flood-affected families, farmers and businesses.

Around 87% of families have now returned to their homes, or actively working towards returning home, following the April 2017 floods (as at early February 2018). A 'building navigator' has been established to help families negotiate the logistics of repairing their homes following cash insurance settlements.

**Contact:** Jenna Rogers, MCDEM Manager on 021 924 181 or [jenna.rogers@dpmc.govt.nz](mailto:jenna.rogers@dpmc.govt.nz).

### ***Factsheets and Quick Guides on declaring a state of local emergency and giving notice of a local transition period***

The 2016 amendment to the Civil Defence Emergency Management Act 2002 introduced transition periods, which provides a seamless transition from response to an emergency to the initial recovery period by ensuring appropriate powers and arrangements are available, such as the ability to limit access to public spaces, and remove or secure dangerous structures.

You will have received a letter informing you that Factsheets and Quick Guides have been published in relation to declaring a state of local emergency and giving notice of a local transition period. These documents consolidate material that was previously available on the civil defence website. In particular, please note that the Declarations Director's Guideline has been superseded by the Factsheet on declaring a state of local emergency.

We encourage you and those that are authorised to either declare a state of local emergency or give notice of a transition period, to become familiar with the content of these documents.

New Declaration factsheet, quick guide, and forms are here:

<https://www.civildefence.govt.nz/cdem-sector/cdem-framework/civil-defence-emergency-management-act-2002/#declarations>

New local transition period factsheet, quick guide, and forms are here:

<https://www.civildefence.govt.nz/cdem-sector/recovery/recovery-framework-and-guidance/>

**Contact:** Clare Robertson, Senior Advisor Recovery on 027 552 3414 or [clare.robertson@dpmc.govt.nz](mailto:clare.robertson@dpmc.govt.nz).

### ***MCDEM Webinar for Mayors***

MCDEM organised in partnership with LGNZ a free webinar for Mayors in December 2017 focusing on their roles and responsibilities in an emergency. You can view the webinar on our website <https://www.civildefence.govt.nz/cdem-sector/capability-development/cdem-training-courses/#webinar>

MCDEM's Regional Emergency Management Advisors are now looking to connect with Mayors, with CDEM Groups, to assist with outstanding questions and discover additional areas needing focus. MCDEM's Capability Team will connect shortly with CDEM Groups to work in collaboration to identify other ways Mayors and elected officials can be supported.

**Contact:** Karen Singleton on (04) 817 8584 [karen.singleton@dpmc.govt.nz](mailto:karen.singleton@dpmc.govt.nz)

### ***National Emergency Management Conference 2018 – Partners for Resilience***

Registrations for the 2018 National Emergency Management Conference are now open.

It is New Zealand's turn to host the Australasian Natural Hazards Management Conference so this year will be held in partnership with the 2018 National Emergency Management Conference. The theme for 2018 is Partners for Resilience.

Some of the fantastic speakers will include Mark McCrindle, Holly Ransom and Mark Crosweller. The 2018's conference will focus on providing relevant skills, advice and discussion that will be both engaging and helpful to emergency management professionals.

#### **Where:**

Conference: Museum of New Zealand Te Papa Tongarewa. Wellington.  
Awards Dinner: Beehive Banquet Hall

**When:** Conference, 30 – 31 May 2018, Awards Dinner 30 May, Workshops, 29 May and 1 June

#### **Cost:**

Conference registration \$500 (including access to all workshops).  
Awards Dinner \$80 per person.

**Registrations open: 28 February 2018**

**Registrations close: 4 May 2018**

**Register online here** <https://goo.gl/Znmiuh>

If you require any further detail please email [Emergency.Management@dpmc.govt.nz](mailto:Emergency.Management@dpmc.govt.nz)

***Cell Broadcast Alerting (delivering Emergency Mobile Alerts)***

The nationwide test in late November 2017 revealed some variability in how different handsets behaved. MCDEM has been undertaking further testing during February to better understand this, and where issues are identified, take these forward with the handset manufacturers.

***Common Alerting Protocol***

MCDEM has published [Technical Standard 04/18, Common Alerting Protocol \(CAP-NZ\)](#) on its website. This is the culmination of work started in late 2015 by a multi-agency working group, including representatives from all CDEM Groups.

Common Alerting Protocol (CAP) is a digital format for exchanging emergency alerts in a standard way, and is used widely and increasingly throughout the world. Due to CAP's flexibility, this technical standard publishes local guidelines to ensure consistency within the New Zealand alerting environment. It is aimed at New Zealand's Alerting Authorities, their technology providers, and indeed any organisation developing or implementing public alerting in New Zealand.

**TITLE:** Ministerial Review - Better responses to Natural Disasters and other Emergencies, 17 November 2017

**To:** Coordinating Executive Group Meeting, 6 March 2018

**From:** Graeme MacDonald, CDEM Manager

**Date:** 19 February 2018

---

### **Executive summary**

The Ministerial Review - Better responses to Natural Disasters and other Emergencies report has been released. The Terms of reference for the review were reported in earlier agendas.

The Northland CEG made a written submission and followed up with an oral submission to the Technical Advisory Group.

The report has a total of 43 recommendations. These recommendations have marked implications for MCDEM; including the establishment of a new organisation to replace the current Ministry of Civil Defence & Emergency Management.

Recommendations made also include to strengthen arrangements at a regional level and to adopt a regional approach, including more formal shared services arrangements and funding on a regional basis.

A team within the Department of the Prime Minister and Cabinet (DPMC) is working to support the Minister of Civil Defence to develop the Government's response to the report. They are aiming to do this by the middle of this year.

A four-phase process has been outlined, that involves socialising the report with key stakeholders, developing policy proposals, testing proposals, and supporting Government decision making on the report.

Initially, the Minister of Civil Defence, along with officials from DPMC, intend to attend meetings with Mayors, Regional Council Chairs, and Chief Executives. There will also be opportunities for CDEM professionals to be engaged in the process.

---

---

### **Recommendations**

1. That the report Ministerial Review – Better responses to Natural Disasters and other Emergencies, 17 November 2017, by Graeme MacDonald, CDEM Manager and dated 19 February 2018, be received.
2. That the CDEM Group notes and supports the findings and recommendations of the Ministerial Review.

**ITEM: 4.0**

Page 2 of 2

3. That the Northland CDEM Group provides support, feedback and assistance to the Technical Advisory Group Implications project team at DPMC where practicable.

## Ministerial Review

### Better Responses to Natural Disasters and Other Emergencies

17 November 2017

Released by the Minister of Civil Defence

Released by the Minister of Civil Defence

# Foreword

Anyone living in New Zealand is keenly aware that as a country we are vulnerable to geological and weather events and other hazards. The last six or seven years have been particularly eventful. Sometimes the consequences have been devastating and tragic – other times we have been luckier. The purpose of this review is to ensure that New Zealand's emergency response capabilities and framework is world leading and well placed to meet future challenges.

The measure of success has to be the extent to which the public has trust and confidence in the emergency management system. The system must lessen the consequences of an emergency - reducing death, injury or suffering, and damage to property.

In our view, ensuring public confidence in the emergency management system will require strengthening the application of current legislation, consistent with the intent of the CDEM Act, together with some changes to allow stronger national-level direction and regulation.

There are many strengths in the current system. The 'all hazards-all-risks' approach and connections to the wider national security system, the integration across the '4R's' of Reduction, Readiness, Response, Recovery, and the emphasis on engaging communities in emergency management, are consistent with international best practice.

There is clearly an enormous amount of commitment from staff from multiple agencies, volunteers and communities in responding to emergencies - this provides a good base to build on. At the same time, however, recent events have shown that the current system doesn't always work as well as it should for communities, stakeholders, and the public overall.

This review invited submissions and met with many people to understand their perspectives on the issues raised in the terms of reference. We visited regions that had recent experience of responding in a state of emergency. We heard a number of consistent themes throughout that engagement. These themes formed the basis of our views on the changes required. We tested these views further before settling on the recommendations in this report.

We looked for best practice in the emergency management systems of other jurisdictions – Australia, United Kingdom, United States and Canada.

We also considered the findings of previous reviews of responses to particular events, and reviews of emergency management systems generally. This included consideration of the findings and recommendations of reviews into recent events, such as review commissioned by Fire and Emergency New Zealand (FENZ) into the Port Hills fires, the independent reviews of the response to the Bay of Plenty weather events in April, and an internal government report on the refinery to Auckland pipeline disruption. These reviews highlight many of the same issues that we note in this review.

I am very grateful to all the organisations and individuals who wrote submissions and took the time to meet with members of the Technical Advisory Group.

I thank all the members of the Technical Advisory Group for their contributions, and the secretariat for their efforts in supporting the work of the Technical Advisory Group. The range of agencies represented highlights the many entities that need to collaborate and understand how each other works, in order to achieve 'better emergency responses'.

**Roger Sowry**

Chair Technical Advisory Group

# Summary and key recommendations

New Zealanders expect a national emergency management system that can be relied on to work well when needed. That calls for a system that is underpinned by clear roles and responsibilities, good information and communication, the right capability and resources, and that makes the most of local knowledge - balanced with the need for specialist expertise and national capability.

This is in keeping with the intent of the current legislation. However, practice over the past fifteen years has not always matched this intent. The result is marked variations in practice and patchy capability across the country, and different understandings about roles, responsibilities and authority.

Ensuring public confidence in the emergency management system will require strengthening the application of current legislation, consistent with the intent of the Civil Defence and Emergency Management Act (CDEM Act), together with some changes, to allow stronger national-level leadership, direction and standards.

Our recommendations are interdependent, and should be considered as a package. We believe that together they will provide New Zealand with a system that will be fit-for-purpose and well placed to meet future challenges.

Change is needed to the functions, structures, and culture at the national level. We recommend establishing a proactive **national emergency management agency** to provide national coordination and support in local emergencies, national control in national emergencies, and to lift CDEM performance overall. This includes professional leadership for the emergency management sector and a far stronger role in setting and enforcing national standards. The national agency must also provide assurance that those standards are being met. We see merit in the national director having stronger powers to direct and to ensure that responses to emergencies take account of national interests.

In all emergencies – regardless of scale – the consequences affect people, local economies, and communities. It is clear that local leadership, knowledge, and engagement with those affected communities is integral to supporting trust and confidence and to ensuring an effective response. We recommend that **mayors should have primary authority for declaring states of local emergency** under the CDEM Act. Further, we recommend providing the option to **declare a 'major incident'** in order to signal the significance of an event and achieve public recognition of the action being taken, without the extraordinary powers invoked under a state of emergency.

Organisational arrangements need to recognise that emergency response will require territorial, regional, and national capabilities in all but the most minor events. Emergencies can quickly escalate from a contained community event to a cross-district/regional emergency. The reality of how emergencies develop, the current legislative and institutional arrangements, and human nature, all contribute to the risk of not realising an emergency is beyond one's capability and capacity until far too late.

The current legislation intended that emergency management would be a consortium of territorial and regional effort (exercised through regional Groups). We are of the view that that intent needs to be strengthened. We recommend retaining the joint committee governance with iwi added. The majority view recommends requiring the development of **more formalised shared service arrangements, implemented by the regional or unitary council, to strengthen a Group-wide approach and accountability**. This would be supported with consistent Group Emergency Management Office structures.

Iwi need to have a major role in regionally based arrangements. Currently the resources, capability, and social capital of iwi to assist in emergency response is not recognised in legislation, and specific needs of Māori, whanau, hapū, and iwi are often not recognised in Group plans. We found a compelling case for iwi to be represented at all levels of the Group structure from our meetings with iwi and our reading of submissions received. As a result, we recommend **clearer protocols with iwi, and full participation of iwi in coordination and planning structures.**

There is a need for far greater professionalisation of emergency management in the CDEM system. Key roles in the system are often part-time. There is no real career path. Training and professional development is very patchy and there are no required professional standards or accreditation. Even with the best will in the world, emergency management responsibilities do not always get the priority they deserve (often an add-on to people's 'day jobs'). Despite the statutory requirement for Groups to have "suitably trained and competent personnel for effective emergency management in their areas", there is no assurance that the people on the spot will have the training, capability, or aptitude needed to respond to an emergency. No one wants response efforts being undermined by having the wrong person in the job. We recommend that **all staff in emergency management roles meet national standards for professional development and training, and key roles (for example, the Controller role) have national accreditation.**

Group effort needs to be backed with national capability that can be deployed as required. The recommendation **to establish a cadre of professionals to act as 'fly-in teams'** first surfaced in the Review of the CDEM Response to the 22 February Christchurch Earthquake. It received strong support then and was endorsed in many submissions received for this current review. There are examples of surge capacity teams deployed at the regional level, in other emergency response services, and internationally. Details of the capabilities required and the most appropriate operating model will need to be worked through. The starting point should be the functions in the CIMS<sup>1</sup> framework – controllers, planning, operations, logistics, intelligence (including science), communications, and welfare – drawn from the agencies best placed to provide these capabilities.

Local context and circumstances are important and must be taken into account in any response. But there is also a national interest in ensuring that the system will work when needed. There is a real need for some consistency, standardisation and agreed protocols (for example, in operating practice and procedures, structures, signage, roles and responsibilities). This allows Groups to support each other, and to help coordination (including, for example, deploying fly-in teams and managing cordons). The current legislation allows for this. Accordingly we recommend **greater national consistency and standards, and a more robust system of audit and assurance to ensure those standards are met.**

CDEM legislation is not as clear as one might expect. Regularly we heard that the authority to act, or the authority to task someone, either does not exist or is not clear. This situation can lead to a lack of coordination, no one really in charge, and the risk of poor outcomes for the community. We see a strong need to **clarify that Group (and national) Controllers have control authority - the authority to task other agencies - under a state of emergency.**

Authority must be backed by joined-up intelligence to support decision-making, with systems that allow agencies to work to a common operating picture. New Zealand's intelligence infrastructure and hardware has been inadequate in recent emergencies, although agencies individually have a lot of capability to draw on. Recent advances in technology could help provide better intelligence for

---

<sup>1</sup> Coordinated Incident Management System (now in its second edition)

emergency management. We think ***a new fit-for-purpose all-of-government NCMC<sup>2</sup> and 24/7 monitoring, alerting, and warning centre*** is required. Further we recommend ***investigating existing technologies available internationally to support a common operating picture***.

Effective responses rely on good communications to affected communities, to the public, and to decision makers. Mayors (and Ministers) will always front in emergencies, but they will need support to do that well. Social media is increasingly important, both as a source of intelligence, and as a communications channel. The Public Information Management (PIM) function in the current arrangements is primarily about information to the public through traditional channels, rather than strategic communications advice to assist Ministers and decision makers. As a result, we recommend ***adding strategic communications to CIMS (and to fly-in teams)***, and ***ensuring timely, consistent, and proactive use of the range of appropriate channels*** (for example, social media, online, radio, print, TV).

We expand on these points in the chapters that follow. Appendix 2 provides details of current arrangements. Appendix 7 also lists a number of secondary matters that came to our attention.

# Chapter One: National level functions and structure

## Introduction

While this is not a review of the Ministry of Civil Defence & Emergency Management (MCDEM) our findings and recommendations have marked implications for the national-level emergency management agency.

The role we envisage is a significant shift in emphasis and stance from that of MCDEM currently and raises issues about the most appropriate structure, functions, and resourcing of the national-level emergency management agency.

## What we found

MCDEM has no formal statutory responsibilities. Its primary role is to enable the Director CDEM (the Director) to meet their functions, use of powers, and duties. These include:

- advising the Minister of Civil Defence
- identifying hazards and risks of national significance
- monitoring and evaluating the National CDEM Strategy and the National CDEM Plan
- developing standards and guidelines
- monitoring performance of CDEM Groups
- promoting civil defence emergency management, and leadership, and stewardship of the CDEM system
- in a national emergency, directing and controlling the resources available for civil defence emergency management, and controlling Groups
- outside of national emergencies, coordinating the resources available for emergency management.

While the purpose and construct of the CDEM Act puts the emphasis on local authorities taking joint action (through regional Groups), the provisions of the Act allow for an assertive, and when required, directive stance nationally to ensure readiness to respond.

Over time MCDEM's approach has emphasised the importance of guidance, relationships, consultation, and suasion, rather than the use of prescriptive or directive powers in the Act. Indeed, early guidance from the Ministry (in 2002, immediately after the Act came into effect) stated that '*the Ministry has no intention to develop rigid codes of Group practice, or conduct audit programmes. It is most appropriate that Groups decide on their own performance levels or targets and evaluation programmes, within their Group Plan*' (DGL 1/02 page 11).

This approach has been appropriate for ensuring commitment to the National CDEM Strategy and Plan Order and Group ownership of their own plans and activities. Moreover it was a pragmatic response given the Act has no penalties for non-compliance with national directions outside a state of national emergency.

Nonetheless, we believe that devolution to this degree has resulted in wide variation of practice, performance, and capability across Groups, and unclear command, control and coordination authority across agencies in emergencies.

We heard from a range of submitters who echoed this view. There was a call for greater clarity and direction in the legislation (fewer ‘mays’ and more ‘musts’) and for more proactive leadership nationally - both in planning and in response. As one submitter noted, ‘Wellington is good at writing guidelines and [Groups] are good at ignoring them’.

We found that MCDEM has also taken on a range of activities that are not directly related to the core business of enabling the Director to meet their statutory functions and duties across all hazards. In particular, MCDEM is the ‘lead agency’ for particular hazards – specifically for natural disasters (earthquake, tsunami, flood, other weather) and for infrastructure failure. MCDEM is also the lead agency for the coordination of welfare services aspects of emergency response and a number of subfunctions related to welfare services (including registration and needs assessment). These acquired responsibilities do not sit well with oversight of emergency management generally in an all hazards - all risks framework.

## Options and evaluation

As later chapters discuss there is a need for a far stronger, more proactive, stance at the national level.

We consider below:

- the functions of that agency
- the organisational form of that agency, and
- resourcing considerations.

### Functions of the national agency

The national agency’s primary purpose is to enable the Director to meet their functions and duties, and exercise their powers (see above). The outcome sought is effective risk reduction, readiness, response and recovery from emergencies arising from all hazards and risks. Specific functions for the national agency arising from this review include:

- being responsible for providing national support and coordination in states of local emergency, and control in national emergencies
- taking an oversight role through developing, monitoring and evaluating the all hazards-all risks National CDEM Strategy and Plan, and addressing matters of national interest relevant to Groups and other agencies<sup>3</sup>, and
- assuring system capability and performance through setting standards and monitoring whether those standards are being met.

Within that, a number of judgements are required:

- **Policy vs operations:** We see the national agency primarily as an operational agency. This includes operational policy (for example developing the National Strategy and National Plan). Strategic policy relating to emergency management across all relevant Acts should be considered as a part of wider national security policy, and accordingly responsibility transferred

---

<sup>3</sup> For example, coordinated business continuity plans across Government agencies, coordinated requests on national capability or scarce resources in Group plans, ensuring attention to national priorities by Groups, and responding to common issues raised by Groups, their plans or other agencies.

to the national security policy directorate of DPMC. This is a change from the original decisions that established MCDEM in 1997. It reflects both the evident need for a greater *operational* focus at the national level to support effective emergency management, and the greater *strategic* focus required than was apparent at the time MCDEM was set up.

- **4R's vs readiness and response:** On balance we recommend retaining responsibility for all 4Rs (with an all hazards – all risks perspective) within the national agency. Arguably, reduction and recovery are primarily *consultative*: readiness and response are primarily *directive*. Managing these different styles within one organisation can be challenging. However, drawing the line between reduction and readiness for example, or between response and recovery, would be arbitrary, and all four aspects need to be seen as a whole to be effective.
- **Lead agency responsibilities:** Lead agency responsibilities need clarifying generally (see discussion in Chapter Six). Further to that, being the lead agency responsible for particular hazards or consequences does not sit well with the all hazards – all risks perspective that the national agency needs to take. We recommend that:
  - *MBIE is specified as lead agency with responsibility for central government advice on infrastructure failure across the 4R's, recognising its relevant policy and regulatory roles and links to industry and sector coordinating entities (telcos, energy). There are also calls to be made in relation to responsibility for transport and water.*
  - *Responsibility for assessing, monitoring, and alerting the hazard risk in relation to geological and meteorological risks (earthquake, tsunami, volcanic, landslide, flood, severe weather) is clarified and assigned to the agency with best information and capability to undertake it. It is clear that the national agency would lead the response to national emergencies, and coordinate and support the response to local emergencies, caused by such events. That is on the basis that a state of emergency has been declared because of the consequences, not on the basis that it was caused by a natural disaster. Responsibility for assessing, monitoring, and alerting the hazard risk, advice on mitigating the risk, and so on, sits better with the agencies with specialist capability in those hazards (for example, MetService for severe weather, GNS Science for geological hazards). This would suggest for example that responsibility for tsunami warnings should be with GNS Science.*
  - *MSD is specified as lead agency across 4R's with responsibility for coordinating welfare services and the subfunctions of registration and needs assessment.*
- **Audit and assurance vs regulatory compliance:** The national agency will need to play a strong role in setting, monitoring and reporting national standards. These standards would be given effect through regulation, which is provided for in current legislation. Some submissions called for a stronger focus on regulatory compliance to ensure duties are being met. We believe it is best to reinforce the accountability of Groups to their communities for performance against national standards, and to rely on local pressure to provide incentive for performance against those standards. Some submissions saw merit in establishing a new position of Inspector-General of Emergency Management (as in some Australian states) to audit and provide assurance over the emergency management system. We do not see the need for that at this stage. Instead we recommend using the current monitoring framework to full effect. This would see:
  - the national agency set standards by regulation
  - Groups self-evaluate performance against those standards
  - the national agency assess and publish Groups' compliance and performance against those standards

- the Office of the Auditor-General (OAG) to report on emergency management matters in its local government audits.

These recommendations all influence the structure and capability of the national agency.

### New National Emergency Management Agency

We believe there is a strong case for a significant shift in culture, objectives, business strategy and operating model at the national level. The choice is either to shift MCDEM's focus and culture within the current organisational arrangements, or to take the opportunity to establish a new National Emergency Management Agency (NEMA) to replace MCDEM.

Restructuring on its own would do little to change focus and culture. However establishing a new agency would provide greater autonomy, transparency, and status for the emergency management role. It may also allow greater strategic focus for DPMC in respect of DPMC's other roles. And it would send a clear signal of change in direction and operating style.

The disadvantage of course would be the level of disruption and instability that any restructuring incurs - and the expense of rebranding.

On balance, we believe that establishing a new organisation is required.

### Structure

There are a range of options for the structure of NEMA. Broadly, these are:

- a business unit within DPMC (as MCDEM is currently) or of another department
- a stand-alone department or departmental agency
- a stand-alone Crown entity, or
- a part of Fire and Emergency New Zealand (FENZ).

We do not see any compelling synergies that would warrant NEMA being a business unit of another department, and we do not recommend this option. In our view, there is a need to raise the profile of NEMA in line with the mission of leadership and culture described above.

We do not favour the Crown entity option. The Minister plays an important role constitutionally in emergencies. The Minister is the authority of last resort with powers that include declaring states of emergency and directing resources. This requires a strong relationship between the agency and the Minister.

Some submitters raised the idea of FENZ taking on a wider emergency management role – in effect becoming or subsuming NEMA. We do not support this. First, it would not allow for the close connection with the Minister that we believe is required - and second, it is not clear that FENZ would be the best place for NEMA to be the national agency in an all hazards-all risks and 4R's sense given FENZ's primary responsibilities.

On balance, we recommend NEMA is established as a departmental agency. This gives the benefit of status as a department -- with a Chief Executive accountable to a Minister – while taking account of its likely size as a fairly small and focussed organisation. It may lack the economies of scale enjoyed by larger departments.

Departmental agencies are hosted by larger departments with some connection to the mission of the agency. It makes sense for that to continue to be DPMC, given the connections to the wider national security system that DPMC also has responsibility for.

## Resourcing

It will be important that NEMA has the resources and capability to credibly do the job expected of it. We expect that will require strengthening of the capability and capacity.

Resource needs are likely to include stronger operational capability (including use of legislative tools) and dedicated response staff to allow it to flex and adapt to all contingencies – with arrangements in place to cover not just medium-scale events, but also large-scale catastrophic events if needed. Secondment arrangements with other departments as well as ‘on-call’ arrangements could strengthen surge capacity.

## System Stewardship

We are aware that many of the recommendations of this review are not new. They have been considered previously, in the context of other reviews of the system, of events, or of exercises. However, progress on actioning them appears to have been patchy or slow. On the face of it, that suggests there may be barriers to addressing these cross-cutting issues that require collective endeavour and commitment from a number of agencies. This situation is not unique to this area of the public service. The practical implementation of the recommendations of this review will therefore need effective mechanisms to progress these cross-cutting issues.

Related to that, there is a need for continued attention to ensure good stewardship of the emergency management system, so that Ministers, stakeholders, and the public can have confidence that the system will work as intended when needed, and be cost-effective. There has been a lot of effort in this area (as a part of the national security system) over recent years. The National Security System Handbook sets out the overall governance arrangements for the national security system. And as noted by the Auditor-General and others, there is much to be commended in the current arrangements.

Nonetheless, on the basis of the findings of this review, we believe there is a need to strengthen the accountability for stewardship of the emergency management system (particularly in respect of multi-agency issues) if we are to be confident that it will remain fit-for-purpose and fit-for-the-future.

The question of how to get better collaboration and collective impact across agencies is not unique to this sector. A range of approaches have been taken across the public service to break down ‘silos’, get better collective impact, and to strengthen incentives and accountability for stewardship. We recommend looking at the applicability of those models for this sector, and in particular:

- **Transparency:** require clear priorities and results, greater CE accountability for achieving those results, and transparency of performance against those results. This is the thinking behind the *Better Public Services* framework for example. In this area, we cannot rely on evidence of outcomes to drive performance and stewardship – it would be too late then. There is room for more clarity about key hazards and risks, and transparency in assessment of how they are being managed. The work of the National Risks Unit in DPMC may be helpful in this regard.
- **Governance:** require joint strategic planning and coordinated implementation across key agencies, backed by a Ministerial group to drive demand. This is the approach taken in other sector groups – in natural resources, social services, and economic agencies for example. This could involve the National Security Committee playing a stronger role in governing work programmes.

- **Setting up a cross-cutting agency:** establish a cross-cutting agency to better integrate work areas, and to disrupt departmental silos. This is the approach taken in the Social Investment Agency for example.

We think there is merit in all these approaches, and recommend that they be developed further to support collective action and system stewardship in this area.

Further, we note that to be effective, all these approaches require stronger incentives and accountability for collective action – perhaps through joint accountabilities in departmental CE's performance agreements, backed up in Ministerial letters of expectation.

## Recommendations

We recommend that you:

- 1.0 Agree to establish a new National Emergency Management Agency (NEMA) as a departmental agency hosted by DPMC, to replace MCDEM.**
- 2.0 Agree that the core function of NEMA is to enable the Director CDEM to meet their functions and duties and exercise their powers** under relevant emergency management legislation, including:
  - 2.1 As the national authority for support and coordination in states of local emergency, and control in national emergencies.
  - 2.2 Taking an oversight role through developing, monitoring and evaluating the all hazards-all risks national CDEM Strategy and Plan, and addressing matters of national interest in Groups' and other agencies' plans and activities.
  - 2.3 Assuring system capability and performance through setting standards and monitoring that those standards are being met.
- 3.0 Note that this will require more proactive leadership** of the sector, and an assertive, and when required, directive stance, as envisaged in the provisions of the CDEM Act.
- 4.0 Retain the 4R's all hazards—all risks perspective within NEMA, with a focus on operational responsibilities,** and consider shifting strategic policy advice responsibilities to a separate part of DPMC.
- 5.0 Agree that the NEMA's monitoring responsibilities, and OAG audit responsibilities, will be used to full effect through publication of results.**
- 6.0 Agree that lead agency responsibilities are allocated to appropriate agencies, and that:**
  - 6.1 MBIE is specified as lead agency with responsibility for infrastructure failure. There are also calls to be made in relation to responsibility for transport and water.
  - 6.2 Responsibility for assessing, monitoring, and alerting the hazard risk in relation to geological and meteorological risks (earthquake, tsunami, flood, other weather) is clarified.
  - 6.3 MSD is specified as lead agency with responsibility for welfare aspects of response.
- 7.0 Ensure that NEMA has the resources and the capability to credibly do the job expected of it.**
- 8.0 Strengthen incentives and accountability for system stewardship, through:**
  - 8.1 Developing transparency, governance, and structural approaches to strengthen collective action and stewardship in this sector, and
  - 8.2 Considering joint accountabilities in departmental CE's performance agreements, backed up in Ministerial letters of expectation.

# Chapter Two: Regional Structure

## Introduction

This chapter considers the structures and arrangements that are overseen by local government.

A core component of the CDEM Act 2002 is the establishment of CDEM Groups. A Group is a consortium of the local authorities in a region, working in partnership with emergency services, to undertake CDEM functions within their Group area.

There are 16 Groups in New Zealand, generally following regional and unitary council boundaries.

A region wide Group approach is explicitly required by the CDEM Act. Groups must prepare a Group Plan that identifies the hazards and risks in the area, and how they propose to manage those hazards and risks. The smallest area over which CDEM activities would be planned and implemented was assumed to be the geographic area of a regional or unitary council, with the provision for neighbouring Groups to operate collectively. We have heard that 'what you do before an event is critical'.

In non-unitary council regions, Groups have discretion in regard to the split of functions between the regional council and territorial authorities, the contribution respective councils make, and any business structures to assist collaboration. The Act is permissive rather than prescriptive on those arrangements.

The question asked by this chapter is whether current arrangements are fit for future needs.

The important principles are:

- the well-being of local communities should be in the forefront of Group decision-making
- continuous and sustained improvement in performance across the Groups should be integral to Group planning
- resources should be used efficiently, with incentives for performance and accountability to communities
- the current Act's intent and purpose should be reaffirmed, with the Act's particular requirement that Group members collaborate
- strong and necessary links to territorial authority functions should be retained
- be adaptable and nimble and take account of resourcing pressures on differently sized councils
- minimum standards should incentivise and support collaboration and cooperation, including the establishment and deployment of fly-in teams.

## What we found

Since the CDEM Act came into effect, the different Groups in New Zealand have taken different approaches.

This has allowed a measure of innovation and flexibility. Some Groups have initiated, and successfully run, a shared services approach (for example in Otago and in Nelson/Tasman). Other Groups have discrete examples of good practice - e.g Bay of Plenty's involvement of iwi and Canterbury's proposal for an intra-regional surge capacity.

At the same time however, the wide variation in approaches has impacted on the effectiveness of emergency management, and the confidence that can be had in the system overall.

**There is little consistency in operating practice**, systems, terminology, roles or responsibilities across Groups. That makes interoperability and cooperation harder. Group Plans are often not clear about roles and responsibilities for Group members and others during emergencies, and certainty about who does what during response is mixed. We heard many submitters call for greater consistency in operating practice across Groups, and clarity about the respective roles for territorial and regional councils.

Approaches are **not always collaborative**. In some areas territorial councils do not buy-in to the joint planning and implementation activities. This outcome is at odds with the existing and clear purpose of the present statute that local authorities will coordinate, through regional groups, planning, programmes and activities related to civil defence emergency management (section 3(d)). The shortcoming in the statute is not that it is not clear about what is required but it lacks positive incentives for compliance and sanctions for non-compliance. This has perhaps given rise to a perception in some quarters that compliance with the purpose of the statute is voluntary. In our view the purpose of the statute is clear. Adherence, through a variety of mechanisms, needs to be incentivised and required.

There is confusion about whether the current arrangements are based on **two or three tiers** of governance and coordination. There was a common perception from submissions and discussion that the CDEM structure was primarily in three parts, and that that was too many. Some submitters noted for example that “recent emergencies...demonstrated that the local, regional, national structure does not work” and that the “the current 3-tier system does give good span of control, however there are too many weak links.” The common references in submissions to three tiers reflects the *act locally, coordinate regionally, and support nationally* tagline that has developed. This is not in the Act. The Act has a two tier system: regionally coordinated Groups and a national level Director.

**Capability** of Groups is very mixed. The CDEM National Capability Assessment Report 2015 shows that 13 years after the Act came into force, only half of the Groups reached the target set by MCDEM for adequate capability across the 4R's. Group Plans rarely acknowledge the number of small district councils that will struggle to resource an emergency response of any scale.

Our conclusion is that, while there is merit in Groups taking account of local circumstances and context, overall these variations affect the ability of Groups to respond effectively and meet their community expectations. We believe a return to the intent of the Act is required.

## Options and evaluation

To that end, we consider that there is a clear need to require Groups to:

- adhere to the statute's present requirements and take a regional approach
- be subject to stronger national standards on minimum requirements (such as capability and operating practice)
- provide adequate funding and resourcing to ensure a minimum standard of performance capability is acquired, and
- be subject to stronger governance and accountability expectations of their performance.

We considered a range of options for achieving that.

1. **Strengthened Status Quo** – no change to the functions and requirements set out in the current CDEM Act, but bolster implementation with stronger national standards (through NEMA), and stronger accountability for resourcing, capability, and performance (through NEMA monitoring and OAG audit).
2. **Mandatory Group framework** - retain the Group joint committee governance arrangements but require more consistent approaches across Groups (in roles and responsibilities, operating practice, for example) and a more formalised shared service arrangements, resourced and administered by the regional council. Like option one, this option can be supported with national performance standards and increased monitoring.
3. **Specify CDEM as a solely regional council function** – this envisages a structure where CDEM activities are a business unit of regional council. Territorial authorities would have to be subject to regional council direction and any delegations.
4. Set up a **separate entity, akin to a council controlled organisation**, with a Board. This would provide separation from the local government structure. It would enable formalised shared service to territorial authorities and the regional council.
5. One **organisation across New Zealand** - so all the key coordination functions, and employment of Group Controllers are run centrally. This option came up in a number of forums, although in different forms.

Option 1 would allow Groups to determine the ‘how’ – that is, what arrangements work best for their circumstances to meet the required regional approach and national standards. The joint committee of elected members would be collectively accountable for meeting those requirements and for the performance of the Group.

Option 2 would specify the ‘how’ – that is, it sets standard arrangements that Groups are to put in place. That allows for greater consistency and confidence that the arrangements will work, but may raise questions about their appropriateness to all Groups’ circumstances. The regional council would be directly accountable for the performance of the Group.

There were a range of views on this. On balance the majority favour option 2. This approach would allow for a stronger regional focus, greater consistency in practice across Groups, better assurance about capability, clearer roles and responsibilities in emergency response, and clearer accountability for performance. Notwithstanding the advantages of option one in allowing arrangements to be tailored to local circumstances, the majority’s belief is that even with stronger standards and accountability, nothing will improve, or it will improve at too slow a pace, if we continue with current roles and structure.

The minority view (held by the LGNZ representative on TAG) is that option 1 (which at various levels might encompass in practice aspects of options 2, 3 and 4) is preferable and less prescriptive in nature. With the right incentives, improved sanctions for non-compliance, and a requirement for revenue adequacy to meet set minimum standards of performance, a fit for purpose outcome consistent with the present purpose of the statute is attainable. It leaves sufficient flexibility to cater for differences in approach between regions.

Options 3, 4 and 5 are substantially different from the status quo, and would all come with substantive cost. In particular, the option of a single organisation (option 5) does not utilise, and build on, the principle that local communities are best served by people who know them and their local issues. The level of commitment we have seen from many councils and individuals to more collaborative approaches does not warrant such a substantial change to the local level arrangements.

On a technical note, we recognise that the Chatham Islands Council, and the special status of White Island, require specific consideration and further work. For the Chatham Islands, the principle of collective support during an emergency still applies. But it is physically very isolated, and has its own Act acknowledging its size and unusual circumstances. For White Island, we note that it currently falls outside any territorial authority, and so has no mayor.

## Recommendations

We recommend that you:

- 1.0 Require Groups to take a regional approach consistent with the intent of the CDEM Act**
- 2.0 Require Groups to provide adequate funding and resourcing for effective CDEM activities**
- 3.0 Strengthen national standards over minimum requirements** (for example, capability, operating practice as outlined in Chapter One)
- 4.0 Strengthen Group (joint committee) governance** (for example, requirements on members to participate, limits on ability to delegate), and
- 5.0 Strengthen accountability for Group performance** (through NEMA monitoring and OAG audit, as outlined in Chapter One)

The majority recommend that you:

- 6.0 Require the development of shared emergency management services across the CDEM regions, covering:**
  - 6.1 The regional or unitary council responsible for resourcing and administration.
  - 6.2 Consistent Emergency Management Office structures, with EOCs across the Group area.
  - 6.3 Regional appointment and oversight of all Controllers, with clear line management and an emphasis on appointments embedded within territorial authorities.
  - 6.4 Defined functions and responsibilities for respective territorial and regional councils.

# Chapter Three: Declarations

## Introduction

Declaring an event, or potential event, a 'state of emergency' is a key part of the emergency management system. A state of emergency, over a defined area, triggers the ability to use extraordinary powers and access resources. The appointed Controller has control authority.

This chapter discusses who declares a state of emergency (local and/or national), factors affecting their decision to declare (or not), geographic scope and the public's expectations around information.

## What we found

Although the Act emphasises taking a Group area wide approach to declaring states of emergency, the default practice is that mayors use the option of declaring over their districts.

There are mixed motivations to 'declare'. The most common reasons are access to resources and need to access the power to evacuate.

Other reasons included to signal to the public that the event needs to be taken seriously, and to give the public confidence that the event is being responded to appropriately.

Reasons for not declaring included concern that it would signal a failure – for example a lack of readiness or poor preparation; no evidence that the emergency services cannot cope; or no need to access powers.

*The Mayor of Whanganui declared a state of local emergency on 4 April 2017, in anticipation of a flood event based on the weather forecast. Although the predicted flood level did not eventuate, the voluntary evacuations and media coverage during daylight mean the community felt prepared. The mayor and council received no public negative reaction to what they refer to as "the dry run".*

We heard that mayors have been asked to make a decision to declare, or not, when they lack experience and training. This can result in confusion, mistakes and delays.

There is inconsistent practice across New Zealand. Different factors are prioritised in different cases. Occasionally there is strong media and public debate about what should have happened. Following extensive coverage and increased discussion about civil defence emergencies in 2017 we note a visible shift in the bias – towards declaring states of emergency.

There was some support in submissions, particularly from Groups, for provision of an interim mechanism - a 'major incident' declaration - that would signal event significance and importance to the public, but not trigger extraordinary powers. For some this recommendation was expressed as a desire for clarity between activation of an emergency operation centre and a declaration.

It is not uncommon for a state of local emergency to be initially declared by mayors over their districts, and then within hours or a day a state of local emergency being declared for the whole, or greater parts of, the region. This latter 'Group declaration' is declared by the relevant person appointed by the Joint Committee – sometimes without consulting or even advising the mayors affected.

## Options and evaluation

We considered three options around who should make declarations of states of emergency.

**Option 1: Mayors have primary authority to declare for their districts (change of onus from the current Act, and recognises current practice).** Deciding to affect residents requires a value judgement that only elected representatives can legitimately make. Locally this will be mayors or a delegated councillor. The downside of this option is that sometimes it is very clear that a much wider area needs to be covered by a declaration (where a multi-district or Group wide declaration makes pragmatic sense).

**Option 2. Status Quo - a chosen elected representative or the Mayor:** this option still has an elected representative making the decision.

**Option 3. Officials, rather than elected members, have the authority to declare:** this is on the basis that the decision to declare is a technical one – the use of powers requires a professional judgement. We are aware that this option, particularly the power of the Director to declare a state of emergency, was specifically removed from the CDEM Act 2002 during the Committee stage.

We recommend option 1, which emphasises the current usual practice of mayors declaring. We continue to be of the view that elected members, when trained and receiving sound advice, are best placed to front any decision to declare, rather than officials. This option also needs to provide for a single declaration that covers more than one district. We do not recommend changing the current powers of the Minister of Civil Defence to declare in certain circumstances.

### Factors affecting the decision and scope

We considered how best to address a reluctance to declare, when declaring would have boosted awareness of an event, good community and personal decision making, and public confidence in those with authority.

A state of emergency area should be limited to the physical location affected (unless requisitioning powers are required over wider areas). It is appropriate for an area as small as a ward (such as Matata) to be under a state of emergency while the rest of the district remains outside of that declared 'state'.

We support the view that **guidance to declare a state of emergency should formally include 'public confidence' as a factor to consider.** On its own, maintaining public confidence may not be a strong reason to access the extraordinary powers triggered by a state of emergency but it should be a factor. The option of declaring a major incident (see below) may also meet this need.

### Major incident

We see merit in **provision to declare a 'major incident' as an alternative to a state of emergency.** Declaring a major incident would likely result in activation of an emergency operation centre, increased social media profile, liaison and coordination with emergency services and use of powers available to councils, Fire and Emergency NZ, the Police, and others, under other Acts. Any need to access CDEM powers could be reconsidered as required. This option formalises what already occurs. An 'activation' is a common initial response of councils and emergency services to events, either followed by a stand-down or a formal emergency declaration. As with the current declarations, it should be a mayoral decision and announcement.

## Recommendations

We recommend that you:

**1.0 Clarify that elected representatives (the mayors) have primary authority to declare states of local emergency for their respective districts.**

- 1.1 Revise section 25 of the Act to give mayors the primary role.
- 1.2 While mayors have primary authority, provide for the Chair of the Joint Committee to be able to declare in appropriate circumstances (consulting with affected mayors where practicable) as a multi-district or Group wide declaration may be most appropriate.

**2.0 Require training and advice as a precondition for any person (primarily the mayors) using their authority to declare a state of local emergency.**

- 2.1 If a mayor is not trained then another trained representative of the elected members of the Joint Committee (the Group) will need to declare.

**3.0 Retain the ability for the Minister of Civil Defence to declare any state of emergency (local or national).** No change to the current Act is proposed.

**4.0 Amend guidance to include 'public confidence' as a factor to consider in deciding to declare a state of emergency.**

**5.0 Provide the option of the mayor declaring a 'major incident'.**

- 5.1 Under a major incident the legislative powers available are limited to those that the councils and emergency services (such as Police) can use under other Acts<sup>4</sup>.

***What might Recommendation 5 look like?***

*Scenario 1: Whanganui potential floods April 2017 - would achieve helpful media profile, and coordination across emergency services. CDEM powers weren't needed (message was get prepared to evacuate). Although forecasts supported a precautionary approach, the 'emergency' never eventuated. If the flood had occurred everything was in place to upgrade to a declaration and start evacuations using powers.*

*Scenario 2: Hawke's Bay gastro outbreak - there was neither a CDEM state of emergency nor a drinking water emergency declared (under the Health Act). CDEM powers were not required. But the council as owner of the infrastructure was a key player, along with the DHB. An announcement of 'major incident' might have raised the profile and assisted dissemination of information.*

<sup>4</sup> Examples include: utility preventative works under section 330 of the Resource Management Act 2002, evacuations under the Fire and Emergency NZ Act 2017 and road closures for repair under the Local Government Act 1974.

# Chapter Four: Role of Iwi

## Introduction

While the review terms of reference does not specifically refer to iwi, we became aware of the role iwi had played in recent emergencies when considering matters related to Outcome 1 and Outcome 2 in the terms of reference. We also had a significant number of submissions that highlighted the capacity and capability of iwi to support those impacted by disasters.

Iwi response to disasters and emergencies, like that of others involved, is swift and driven by local needs. There is commonly early activation of marae, Māori wardens and other Māori whanau, hapū, and iwi networks to the fullest extent possible, in the context of the emergency.

Iwi's first call is to support whanau/hapū.

Iwi are also a huge source of social capital with significant resources to activate in response: such as welfare – shelter and food, communication networks and access to key supplies.

However, iwi participation in emergency management is not included in current legislation and the relationship is not always well managed at Group or national level.

## What we found

The settlement of historic claims under the Treaty of Waitangi has resulted in significant growth of iwi business, social development and general organisational strengthening across New Zealand.

Some councils and their staff have not kept up to date with developments in this area and are not engaging with local Rūnanga appropriately – this is especially noticeable in iwi being 'consulted' far too late in planning stages.

Marae are commonly well resourced to assist in emergencies. The philosophy of manaakitanga and looking after the visitors first prevails, and the focus is the whole community. This capability is reflected in National CDEM Plan clause 73(5)(g)(i). In some recent events (14 November earthquake and flooding in Whanganui) local iwi initiated resources and communication networks, but there was no formalised structure for their involvement.

We received many submissions from iwi and others regarding iwi who responded rapidly to community needs but were excluded from operations discussions or included so late that they felt insulted. Iwi expect to be involved because they know the locality and people in it.

In some recent emergencies iwi were not consulted during the local planning or response phases even though 80% of the affected population identified as Māori. Funding for reimbursement of costs incurred by Marae and/or other iwi resources was either not clear, or was regarded by iwi as bureaucratic and complex.

One exception was the relationship being developed in Whanganui where iwi participated from the outset in April 2017 for the first time. There may be others.

## Evaluation

Iwi alone carry the mandate to determine the nature and extent of the role they may wish to play in emergency management. We support and encourage a nationally led approach to develop and enhance the relationship between CDEM agencies (nationally and locally) and iwi. We also encourage a nationally led initiative to support the development of locally led protocols for iwi participation in emergency management.<sup>5</sup> It is important that all Groups and responders work appropriately with iwi.

While Te Puni Kōkiri (TPK) has a role in the region and can assist with engaging iwi organisations, this does not mean that TPK is able to represent the regional iwi. There is greater value in agencies with a role in response working to develop relationships with key iwi organisations in advance, as an integral part of emergency management planning and preparation. Iwi representatives commented that they wished to be viewed as a partner of value, engaged with at the outset, rather than just another entity to consult with when plans were developed.

Evidence from submissions and our meetings with iwi created a compelling case for iwi to be represented at all levels of the Group structure. However iwi were quick to point out that there are varying levels of capacity to engage. Participation needs to start with a conversation. In many regions there are a number of iwi in a region. In most cases iwi have good relations and regularly work together to ensure they are able to resource participation.

The recent engagement model developed to enable participation under the Resource Management Act was identified by iwi as one that Groups could look to. This is an approach that could also work for enabling iwi to determine how they wish to participate in emergency response and across the 4R's.

### Mana Whakahono-a-Rohe

There is a participation model that has been written into the Resource Management Act (RMA) legislation that may provide a model for engagement on emergency management. Mana Whakahono-a-Rohe are mechanisms for iwi participation in local government decisions. They are written agreements between local government and iwi authorities to record how iwi authorities will participate in the preparation, change or review of a policy statement or plan.

These agreements are not limited to one iwi authority and one council, there can be more than one party to each side of the agreement. The RMA provides several guiding principles for the participating authorities that wish to initiate a Mana Whakahono-a-Rohe.

## Recommendations

We recommend that you:

- 1.0 Recognise the capability** that iwi bring to emergency management.
- 2.0 Legislate** to enable iwi to participate in planning for and responding to a natural disaster or other emergency, and to bring more clarity to their role:
  - 2.1: Appropriate iwi representatives to be part of the Groups' Coordinating Executive Group (CEG).
  - 2.2: Appropriate iwi representatives to be included on the Group Joint Committee.
- 3.0 Look to the recent Mana Whakahono-a-Rohe** amendments to the RMA as a model for a future CDEM Act amendment. Both the Local Government Act and recent amendments to the RMA provide examples of legislative changes sought.

---

<sup>5</sup> Toi Moana – Bay of Plenty Regional Council submission

# Chapter Five: Capability and capacity

## Introduction

People and organisations involved in emergencies need to have the appropriate experience and competence to manage public safety effectively and efficiently. Capability relates to the degree of competency and skills, knowledge and attributes. Capacity refers to the quantity of a resource – in this case having the appropriate number of capable people. Both are important.

Under the CDEM Act, Groups are required to ensure suitably 'trained and competent' personnel are available for effective emergency management in their area (section 17). The Group Controller is also required to be suitably qualified and experienced (section 26).

CDEM capability is currently assessed in a number of ways.

- Through reviews of emergency responses and exercises.
- The national capability assessment of individual Groups by MCDEM (2012 and 2015 carried out to date).
- Three-yearly progress reports to Cabinet on the National CDEM Strategy.
- Five-yearly reviews of the National CDEM Plan.
- MCDEM is subject to a number of government auditing and monitoring processes.

## What we found

There is no clear definition of what 'trained' means when referring to the capability of Controllers or other roles in the CDEM framework. The term is used often but may mean a range of things – complete or incomplete, up-to-date or undertaken many years ago.

### Group and council capability and 'fly-in' resource

The national capability assessment reports<sup>6</sup> demonstrated that, after 13 years, Group capability was not up to the mark in the majority of Groups - only half of the 16 Groups achieved the MCDEM target for performance across the 4R's in 2015. Existing approaches to 'encouraging' appropriate Group capability are not succeeding.

Small councils have little capacity on their own for anything but minor and common events (localised fire, floods for example). The evidence demonstrates that most will rely on regional/Group resources. The major metropolitan councils are better able to cope, but even there, there is a significant range of capability. And as the Canterbury earthquake sequence showed, all councils will require significant assistance once an emergency reaches a certain size or lasts longer than 3-5 days. In most emergencies the ability of Groups to cover the Controller(s), PIM and other key roles will quickly reach capacity. Local responders may also be personally affected by the emergency, and as a result, find it hard to carry out their responsibilities.

Accessing capacity from other Groups generally relies on the relationships established prior the event by emergency managers. Even then, accessing resources can be very slow in a rapidly evolving situation.

---

<sup>6</sup> CDEM National Capability Assessment Report December 2015

Recent practice has been to fly in staff from local and central government to support local response (for instance, Kaikoura, Hurunui, and Marlborough following the Kaikoura earthquake and tsunami; Havelock North for the drinking-water emergency; Whakatane after cyclones Cook and Debbie). These staff have not, however, been ready to go on an hour's notice, so deployment has taken a day or two.

The Review of the CDEM Response to the 22 February Christchurch Earthquake recommended developing a 'cadre' of response professionals who could be deployed as required. Our findings indicate that this 'fly-in team' is a much needed resource that would provide assurance - to the public and to the government. Many of the submissions we received supported the concept.

### Controllers

The Controller has significant statutory powers and protection from liabilities. However there is no accreditation or certification required for Controllers. A recent survey of Controllers found that less than a third of Controllers had any training before they took up a Controller role.<sup>7</sup> The appointment process for Controllers is ad hoc and there are some people in this role who do not have the skills and knowledge needed for the role.

There are currently around 230 Controllers and 31 of these are permanent full-time Group staff. Approximately half of all those who identify as Controllers are trained. There is no formal process for ensuring that all Controllers maintain and update their skills.

There are two courses for Controllers. One funded and endorsed through MCDEM and delivered in partnership by Massey University and Auckland University of Technology (AUT). The other was recently established at Auckland University. Auckland Council Controllers attend the Auckland course.

Of the 78 participants from the 2014 and 2015 cohorts at Massey University, 42 have completed the course (54%). There is a small expected dropout rate. Of the more than 150 people who have enrolled in this course 51 have completed the third phase – some, of course, have not yet had sufficient time to complete this section.<sup>8</sup> The course was due to come up for re-tender in June 2017, but was delayed for a year because of this review.

#### **Example of relevant capability development: Maritime NZ's On-Scene Commanders**

The Maritime On-Scene Commander training was identified as a good example of training for response by a number of people interviewed in the course of this review. National On-Scene Commanders are appointed by the Director of Maritime New Zealand and the Regional On-Scene Commanders are appointed by the Regional Councils. Regional Commanders train at the Marine Pollution Response Service (MPRS) assessment centre based at Te Atatu South in Auckland.

People who undertake this role will have demonstrated competency in their background, and personal qualities. They may have completed other well regarded and relevant training and would have been involved in actual Maritime events or exercises. They will have a management or leadership background.

Once training of National On-Scene Commanders has been completed the potential commanders are approved by the Director of Maritime New Zealand, who has the power to veto anyone he or she does not think is suitable for the role.

<sup>7</sup> MCDEM Controller Development Survey Results Feb 2017

<sup>8</sup> MCDEM Controller Development Survey Results Feb 2017

## Coordinated Incident Management System (CIMS) training

There is no complete training package to ensure competence in all of the CIMS functions. There are some NZQA unit standards for emergency management accessed through training institutions in various locations nationally but most of the unit standards are now out-of-date or expired. MCDEM is in the process of developing CIMS functions courses (there is a bridging unit to link the Unit Standards pathway into the CIMS function courses under development). Some courses are already available for Groups to access online but there is no ongoing 'train the trainers' programme. Submissions indicated that some Groups have difficulty finding appropriate trainers. MCDEM does not deliver training except to its own staff.

## Emergency agencies

New Zealand's police, fire, and defence force all have significant training regimes in place. Some aspects of training that take place within these organisations are relevant for those undertaking roles in emergencies. It is also important that Controllers and government departments with emergency management responsibilities have a full appreciation of the role that these entities play during response. At present, often only ad hoc linkages are made between response agencies for training purposes.

## Volunteers

Volunteers are important in the CDEM system, but the arrangements for deploying volunteers are unclear. The Health and Safety at Work Act 2015 puts responsibilities on those who assign tasks to volunteers that are similar to workplace responsibilities for employees.

There are around 17 volunteer New Zealand Response Teams (NZRTs) in New Zealand. Most of these are attached to Groups, although not all Groups have identified a requirement to have one or more NZRT. There is a range of competency within and between these NZRTs. The national committee led by MCDEM and NZ Fire Service (now Fire and Emergency NZ) that once addressed the light rescue function (one of a number of functions NZRTs may perform) is no longer in place. Accessing the allocated \$1 Million of ACE<sup>9</sup> funding (intended to train volunteers) is bureaucratic and involves a Group linking their allocated funding places with one of four tertiary providers that TEC<sup>10</sup> has nominated for the training.

Spontaneous volunteers including spontaneous groups such as the 'student army' and 'Farmy Army' have increased since the 2010/2011 Canterbury earthquake sequence. Connecting the formal response structures with spontaneous individuals and groups is documented in CIMS (2<sup>nd</sup> edition) and the Volunteer Coordination Director's Guideline but has not been practically and consistently implemented. Some iwi welfare or other support groups have also identified themselves as volunteers. Where possible it is important that these spontaneous volunteer Groups, much respected and appreciated by impacted communities, are protected from personal risk by careful management and the assigning of appropriate tasks.

<sup>9</sup> Adult Community Education

<sup>10</sup> Tertiary Education Commission

## Evaluation

Professionalism in emergency management is patchy. The basic choice is to either:

- **Professionalise emergency management:** this would mean far greater attention to capability development (including training) and professional development, accreditation and certification for key positions (such as Controllers and other CIMS functions) and clear career paths. This would put it on a par with other emergency services, commensurate with the responsibilities and capability required for the role. It would however imply a major shift to operating models.

or

- **Continue with best-endeavours approach:** this would see emergency management continue to be primarily as a local government activity undertaken by local government officers alongside their other work.

In our view the case is compelling for professionalisation. This would need to be supported with appropriate appointment, standards, training (through a single national capability development system), with an associated, recognised certification process.

## Training

Controllers have significant powers attached to their position. They must be able to command the respect of their counterparts in Police, Fire and Emergency NZ, Ambulance, and Defence. Training for Controllers must have sufficient rigor and accreditation and include personal competencies. People undertaking this role need to perform well in high stress situations. Controllers commonly have an important but different role prior to events that require a mix of valuable skills and personal attributes. The Director must have the right to veto Controller appointments that she/he does not consider appropriate. Having two Controllers courses with different training content and approach is a problem when the outcome sought is consistent performance from trained and competent Controllers.

There are some genuine obstacles to achieving and maintaining competence across the wider CIMS functions. Upskilling any workforce requires time and practice. Emergency response and recovery is no different. Councils, emergency services, lifeline utilities, public agencies, and other organisations will need to agree to prioritise training and accreditation over other work (including day-to-day work), to ensure that an appropriate number of staff have the right qualifications. The current duplication of training in CIMS is confusing.

We understand that there is work underway on a case for updating and strengthening NZQA unit standards for CIMS training. This work may contribute to supporting the professionalisation that we recommend.

Clearly, there would need to be a managed transition to a professional emergency management workforce. Work would be required on priorities, cost effective options, staging and recognition of the different starting positions. During this transition it will be important to retain and support current capacity – both paid and volunteer.

## Fly-in Teams

We support the concept of a fly-in team made up of individuals who could perform the roles of Controllers, as well as taking care of planning, logistics, intelligence and communications. The capabilities required and operating model need to be further worked through. Members would need to be carefully selected and trained. Deployment could be either on request of the Group Controller, or on the discretion of the Director.

The fly-in team proposal has been considered over several years, but has not been implemented. The matter of funding is still unresolved: there is a cost involved in establishing and maintaining the team, as well as the deployment costs.

The fly-in teams would encourage an *NZ Inc.* approach. The recommendation recognises that there is strong capability within the emergency management and government sector in New Zealand. There are existing highly regarded deployment models.<sup>11</sup>

## Volunteers

Volunteers within the NZRTs should have training certificates relevant to a national standard, and a process for confirming or invalidating existing training certificates.

We consider that during an emergency response when deployed for the purposes of urban light rescue Fire and Emergency NZ should oversee those teams that are trained, equipped, and resourced to an agreed accredited level. This would not imply that those teams would fall under the umbrella of FENZ outside of response. A conversation between CEG chairs, FENZ and NEMA is needed to progress how future response team functions and relationships could work from an operational sense, including responsibilities of councils that choose to employ these teams directly.

In addition we understand that FENZ would encourage any members of these teams to consider joining their Volunteer Brigades (and meeting FENZ requirements for volunteers) if they wish to undertake a volunteer role in Fire and Emergency.

### Australia's trained and accredited state volunteers

*'The most important assets of the State and Territory Emergency Services are their volunteers.'*

Western Australia has a robust system and network in place for training, developing and deploying volunteers. Some key aspects include a high level of standardised training, which is required to be maintained, and volunteers must be accredited. In turn they are issued with ID cards and uniforms. This system has resulted in a highly professional and experienced force – one which is greatly respected and valued by the community and other emergency services. They are considered to have a 'key role in countering the effects of natural and man-made emergencies'.

## Recommendations

We recommend that you:

### 1.0 Strengthen the professionalism of emergency management, with a particular focus on Controllers.

- 1.1. Require all Controllers (Group and National) to meet one mandatory national standard of technical and personal competency, prior to their being accredited as a CDEM Controller.
- 1.2. Confirm that only accredited Controllers are permitted to act as Controllers during any declared state of emergency.
- 1.3. Investigate the ability to leverage off Australian Emergency Management experience.
- 1.4. Require the Director to personally confirm that a Group Controller meets the expected standard prior to formal accreditation.

<sup>11</sup> The Ministry of Foreign Affairs (MFAT) deployment guidelines for emergencies in the Pacific provide an example that could be used to develop similar deployment guidelines for the Fly-in-Team. The MFAT deployment guidelines were referred to positively by senior staff in the emergency sector.

- 1.5. Investigate a process by which the status of someone as an accredited Controller is reviewable.
- 1.6. Develop national training and professional competency for all the relevant CIMS functions.

## **2.0 Establish 'Fly-in' Teams**

- 2.1. Have national teams of professional CDEM Controllers and other essential roles (such as CIMS functions, strategic communications, science) that can be immediately deployed (either on request of the Group Controller, or on the discretion of the Director)<sup>12</sup>.
  - 2.1.1 Provide for professionals to be on the 'Fly in' roster from a variety of agencies.
  - 2.1.2 Recognise that some or all of national support roles are likely to be required with any state of emergency that is more than minor.
  - 2.1.3 Investigate where these priority roles can be sourced from (secondments are a possibility).

## **3.0 Ensure a consistent high standard of volunteer competence**

- 3.1 During an emergency response when deployed for the purposes of urban light rescue, shift oversight of trained and accredited NZRTs to FENZ as the agency with the most appropriate functional alignment with this volunteer capability.
- 3.2 NEMA to work with WorkSafe New Zealand to get clarity on its accountability when Groups engage volunteers (and other employees) in response.
- 3.3 For NZ Response Teams:
  - 3.3.1 Agree that during an emergency response when deployed for the purposes of urban light rescue FENZ have control of the teams if they are trained, equipped and resourced to an agreed accredited level.
  - 3.3.2 FENZ and NEMA to work with CEG chairs and NZRTs on how the teams can be recognised as being trained for responsibilities that they can appropriately assist with during emergencies.
- 3.4 Identify how New Zealand can incorporate best practice from Australia's State and Territorial Emergency Services (SES) in recognising/training/accrediting volunteers, including assessment of volunteers' existing qualifications.
- 3.5 Explore how best to protect volunteers from liability if they are 'in the system' i.e. NZRT, USAR.

---

<sup>12</sup> Response will range from mentoring and support to full control depending on circumstances.

# Chapter Six: Authority for Command, Control, and Coordination

## Introduction

This chapter examines the structure in place for command, control and coordination in an emergency. We considered whether current legislative frameworks, including roles and decision-making powers, and related practices were fit for purpose, well managed, and efficient.

Having clear lines of authority, both across agencies and within structures is critical to having a well-managed and efficient response.

Command, control, and coordination have specific meanings in this context (also refer Appendix 2). There is an assumption that all roles are undertaken by competent persons – and this is covered in Chapter Five.

- Command (authority within an agency) is executed vertically, and includes the internal ownership, administrative responsibility, and detailed supervision of an agency's personnel, tasks, and resources. Command cannot normally be exercised outside an agency.
- Control (authority across agencies) is executed horizontally, and is the authority to direct tasks to another agency, and to coordinate that agency's actions so they are integrated with the wider response. Control authority is established in legislation or in an emergency plan. This is control to task a certain agency towards a certain outcome (achieve a managed evacuation for example). It is not control over the actual resource – personnel and vehicles.
- Coordination: bringing together agencies and resources to ensure unified, consistent, and effective response. Command and control assist with coordination by defining authority between and within agencies.

## What we found

In many instances, protocols, relationships, and local knowledge about expertise assisted a good response. But we also found examples of confusion and frustration when formal authority was lacking and expectations of who would do what were not met.

### Command authority

Command authority within supporting agencies (for example, emergency services, NZDF) are well established. We do not discuss them further here.

During declared states of local emergency the command structures within the CDEM system (between the national and local level, and within the local level) are limited and sometimes unclear. This is complicated by the wide range of Group structures.

The Director CDEM has no ability to direct the actions of a Group Controller unless a state of national emergency is declared. No Director, that we are aware of, has utilised their power to act on default of a Group or person<sup>13</sup> - for example, in the event of failure to appoint a 'suitably qualified and experienced' person as Group Controller (required under section 26 of the Act).

---

<sup>13</sup> A power under section 75 of the CDEM Act to undertake an action where the Group has been negligent.

We found mixed understanding of the command powers of the Director. Some have assumed that whenever the NCMC was activated, by default the position of National Controller and/or the Director had increased authority. This is not the case. However, there are scenarios where it may be beneficial for the Director to have the ability to intervene – in particular, to ensure national interests are considered in local decision making, or to ensure that weight is given to national-level knowledge and intelligence.

***Scenarios where local decision-making may not take account of national interest***

- The Director CDEM, due to their access to intelligence from within the 'centre' is able to make an urgent decision when a delay might adversely affect a community (for example, deployment or evacuation).
- A matter has been escalated to the national level, for example due to complexity, multi-agency interest or media attention.
- Management of scarce national resources, when there are competing local needs (i.e. multiple states of local emergency).
- There is a matter of specific national interest that needs consideration during a primarily locally managed event (for example infrastructure of national interest).

Within the Group structure, command authority can also be unclear. Currently when a state of emergency is declared, the appointed Local Controllers have the same power as Group Controllers. It is not a delegated authority (although Local Controllers are subject to direction from the Group Controller during a state of emergency). As a result there are at times both Local and Group Controllers making decisions over the same matters. This can be confusing, inconsistent, and hamper effective responses.

We also found that the authority of a Group Controller during an emergency was not always well understood or respected. Within councils, Controllers may face a conflict of interest with senior council managers, Chief Executives or elected officials expecting to direct operations or decisions during a response.

#### Control authority

The Director/National Controller appears to have wide control authority in a state of national emergency under the CDEM Act. However, when there has been no such national declaration, and local government and emergency services are managing an event, the Director's powers are constrained. The Minister retains backstop powers of control. This has not been used to date.

Under the CDEM Act, Group Controllers do not have full control authority even when operating under states of emergency. This has been evident in some recent events, where Group Controllers have not had the clear authority to task other agencies. In many instances this has not been a problem. Activated emergency operation centres (EOCs) bring resources together (such as Police and Fire and Emergency NZ) and allows for coordination in response. However, in other instances, essential tasks were identified and it was not clear if anyone had either responsibility to do the task or the ability to task an agency. And we heard of examples where responsible agencies simply didn't turn up to the EOC even though an emergency had been declared. This has led to a perception that responding agencies can pick and choose what they do, despite agreement to tasking for these roles in planning documents. For example, tasking for a range of likely activities (such as logistics, and movement control) are described in the National Plan Order 2015. However, there is no certainty that the Plan will be followed, and there is no penalty for non-compliance during a state of local emergency. A

recurring example of unclear tasking was the management of cordons – the task of overseeing who accesses closed roads or areas and related safety issues.

### Lead Agency

The term ‘lead agency’ is used in a range of documents, including the National CDEM Plan Order 2015, the National Security Handbook, CIMS 2<sup>nd</sup> Edition, and the Group Plans. The term’s meaning changes with context and by document. It can mean variously:

- the agency with responsibility for managing a hazard across the 4Rs (including managing the response to an incident)
- the agency with the primary mandate to manage an emergency arising from that hazard
- the lead as directed by the Controller, or
- the functional lead for managing particular consequences (e.g. welfare, rescue, financial support).

Some documents emphasise continuity – providing horizon scanning and risk mitigation for a named hazard. Others emphasise the lead will change -- across the 4Rs and/or over time (for example as an incident becomes an emergency).

The control authority and powers that lead agencies have in their own legislation varies markedly. In some instances, the lead agency specified (in respect of various hazards) changes between the documents. For some hazards it is not clear that the most appropriate agency has been specified as the lead agency. For other hazards, there is no lead agency specified.

Unsurprisingly, this has led to a range of interpretations. The responsibilities and authority of a lead agency is unclear. This situation is confusing, occasionally contradictory, and in an emergency it is potentially risky.

### Coordination

We found that use of CIMS is recommended, but not mandatory. It is not universally used. That raises coordination issues in response.

A key coordination forum is the CEG. Membership varies by Group. There are some statutorily required positions. However, important parties (such as ambulance services, and iwi) are often not part of the coordination structure.

We heard many submissions from particular community groups concerned to ensure that response arrangements would be effective in meeting their needs. There were representations covering rural perspectives, animal welfare (including pets and animal rescue), provision for children and young people, recognising interests of blind and other people with disabilities, and isolated communities. The concerns tended to have most connection to the welfare function under CIMS, in particular concerning the need for good awareness about the diverse needs of the community in emergency response. This also requires good intelligence and situational awareness, effective public information, and clear command and control authority.

## Options and evaluation

The basic choices are around:

- **Status quo legislation** and rely primarily on coordination (between agencies, and across levels in the system) in states of emergency. This is on the basis that emergency response needs a great deal of judgement about priorities, specialism, flexibility and agility and that strict control is unlikely to allow for an effective response in practice.

or

- **Strengthened legislative mandate** to ensure clearer command and control in emergency response. This is on the basis that clear control across agencies and command structures (particularly through the CDEM structures) is needed to ensure optimal use of resources and coordination of effort, and to avoid confusion that can impede effective response.

Overall, we consider that clearer command, control and coordination is required. The framework for this is already provided by the CDEM Act 2002. For some recommendations the strength of the mandate and the mechanism (for example whether primary legislation, regulation or guidance practice is appropriate) requires further work.

### Command

We recommend a new power for the Director, providing for the national interest to be considered in responding to local emergencies. As this power would cut across local decision-making, we consider that it would need to have appropriate checks and balances. This would include, for example, clear parameters around its use. It would also need to be used transparently (for example, requiring reporting of its use to Parliament, or mandatory independent review of its use).

More generally, the enabling rather than directive nature of the Act creates a lot of variation in roles and responsibilities across Groups. Greater standardisation, including in operating practice and coordination structures, is needed to allow for interoperability between Groups. This includes, for example, the need to provide for the fly-in teams to operate effectively. As discussed in Chapters One and Two, the current Act allows for the Director to set standards. We recommend that these provisions be used to support appropriate minimum standards to allow greater coordination and interoperability across Groups.

We think that within the Group structure there should be a clear command authority below the Group Controller, with any 'local' or secondary Controllers to be under the clear command authority of the Group Controller in charge of an event (noting there will be roster changes). They should not have independent powers. We also think that Controllers who may be based within a territorial authority need to have responsibility to coordinate across the wider Group area, as well as a responsibility towards that territorial authority. This will be assisted by the recommendations in Chapter Two.

It must also be clear that during a declaration the authority of a Group Controller is understood and respected, including the relationship to the mayor, other members of the council, and the CE. The unequivocal authority of the Controller assumes that all Group Controllers are competent - appropriately trained and accredited (see Chapter Five).

### Control authority and lead agencies

We recommend that when a state of emergency is declared under the CDEM Act, the Group Controller has clear control over the emergency response. This includes the ability to task other agencies. Further, we see a need for clearer and more binding default tasking, for example in National and Group

Plans. These Plans can set out tasking and resources available to support response, along with appropriate limitations. Prior to an emergency the key emergency agencies need to agree where, and when, they perform particular tasks. There are some obvious matters for which responsibilities and parameters can be pre-arranged.

*Example of tasking in a Group Plan 'NZ Red Cross has agreed to manage spontaneous volunteers during the response phase as outlined in the Memorandum of Understanding between the Group and NZ Red Cross.' (Nelson Tasman CDEM Group Plan 2012)*

Our findings on lead agencies leads us to make two points:

First, we agree with the need to be clear about which agency has responsibility for advice and support on known hazards and risks, and for managing that hazard across the 4Rs (this may include managing the response to an incident caused by that hazard or advice on the change in risk). This is the intent in the National Security Handbook.

We recommend that the list of lead agencies is reviewed to ensure it is complete and appropriate, well-understood by those agencies and other parties involved, and given consistent expression in relevant plans. (Also refer to Chapter One for discussion on lead agency responsibilities for NEMA).

Second, we are of the view that there needs to be more clarity about which agency is in control during an emergency. If an incident has developed to the point where a state of emergency is declared under the CDEM legislation (in order to access resources or powers), then the CDEM (Group or National) Controller needs to have responsibility for overall management and control of the emergency response. This is irrespective of the hazard that caused the emergency. The 'lead agency' for the hazard will continue with responsibility to manage the specific incident (FENZ managing the fire, Police the criminal act) while the CDEM Controller will have control for the managing the consequences of emergency overall (for example, setting objectives and directing the overall response, identifying critical resources and prioritising effort).

### Coordination

Although improvements can be made, CIMS is a valuable framework. We recommend that all those involved in managing emergencies commit to its use and collectively refining it so that it continues to be fit for purpose.<sup>14</sup>

We recommend extending the membership of CEGs to include all key entities required to coordinate an effective response. This would include ambulance as an emergency service. It would also include iwi (see separate recommendation in Chapter Four) as appropriate for the Group area. We would also emphasise the role of the Regional Emergency Management Advisors (currently with MCDEM) in supporting coordinated advice at the CEG level, and suggest that they are recognised as full members.

---

<sup>14</sup> We note that the Port Hills fires Operational Review came to the conclusion that FENZ should adopt AIIMS (the Australasian Inter-service Incident Management System) rather than the New Zealand endorsed CIMS, on the basis that that would allow for better interoperability between NZ and Australian fire services. FENZ is yet to make a decision on this recommendation. The TAG recognises the benefit of AIIMS for FENZ operating in an individual agency environment. But, the focus for the TAG is the multi-agency environment and coordination across New Zealand agencies. Hence collective use of CIMS, updated as necessary, was considered more appropriate.

We also recommend reinforcing the expectation that representatives of agencies in the CEG will attend emergency operation centres (if at all practical) when they are activated, either in a declared CDEM state of emergency, or a developing event. Coordination needs liaison between agencies, and that requires participation. This includes services such as Police, FENZ, Ambulance, DHBs, and other parties such as iwi.

We do not make any specific recommendation in this report for representation of particular community interests on CEGs. We believe the increased professionalism (covered in Chapter Five) and stronger regional approach (Chapter Two) will help.

## Recommendations

We recommend that you:

### *Command within the CDEM structure.*

#### **1.0 Enable the Director to direct Group Controller(s) during an emergency under the CDEM Act when there are matters of national interest**

##### **1.1 Include appropriate checks and balances to this command authority:**

- 1.1.1 Setting out circumstances of national interest requiring intervention
- 1.1.2 A requirement that any use of the authority is transparently reported.

#### **2.0 Create generic authorisation of accredited Controller appointments**

##### **2.1 Provide for qualified people to be brought in during events (fly-in teams – see Chapter Five) and be able to:**

- 2.1.1 Access the relevant CDEM Act powers of a Controller, and
- 2.1.2 Enable them to act in the role of CDEM Controller anywhere in the country.

#### **3.0 Require clear command authority at Group level.**

##### **3.1 Require any 'local' or secondary Controllers to be under the clear command authority of the Group Controller in charge of an event (noting there will be roster changes). They do not have independent powers.**

#### **4.0 Confirm the authority of Group Controller**

##### **4.1 Reinforce that there is no mandate for the Group Controller to be subject to direction by those that might have a different relationship to them outside a state of emergency.**

### *Control across agencies during response*

#### **5.0 Require clear control authority for Group Controllers**

##### **5.1 Ensure that when a state of emergency is declared under the CDEM Act the Group Controller has control over the emergency response. This includes being able to task other agencies.**

- 5.1.1 Develop and set out parameters of agency tasks – such as appropriate limits and preconditions – in the relevant Plans (National CDEM Plan Order for nationally managed hazards and Group CDEM Plans), and
- 5.1.2 Develop effective mechanisms to bind and clarify responsibilities.

## **6.0 Assign default tasking to agencies**

- 6.1 Require that relevant agencies specifically consider likely emergency response tasks and assign responsibilities, including:
  - 6.1.1 The CIMS functions (for example, logistics, planning, intelligence) within operation centres.
  - 6.1.2 Commonly experienced short-term tasks of manning cordons, rapid assessment and air traffic control.
  - 6.1.3 Roles and responsibilities as part of the fly-in team discussed in Chapter Five.

## **7.0 Clarify and review lead agencies descriptions**

- 7.1 Review the list of lead agencies so that it covers agencies with the primary mandate for overseeing a particular hazard or risk across the 4R's (including who manages the response to an incident) and ensure consistent expression through relevant documents.
- 7.2 Change references to lead agency to clarify that, when a state of emergency is declared under the CDEM Act:
  - 7.2.1 A Controller (Group or National) has overall control to manage the emergency, and
  - 7.2.2 The agency managing the hazard continues to have responsibility for managing the specific incident.

### *Coordination*

## **8.0 Require use of CIMS (2<sup>nd</sup> edition)**

- 8.1 NEMA to require all entities listed at the front of the CIMS 2<sup>nd</sup> Edition to commit to using it, and collectively updating it to add clarity and reflect NZ legislative roles and authority.

## **9.0 Extend membership to key entities required to coordinate an effective response**

- 9.1 Extend CEG membership to include ambulance as emergency services and also iwi (see separate recommendation in Chapter Four) as appropriate for the area.
- 9.2 Emphasise the role of the Regional Emergency Management Advisors (currently with MCDEM) and recognise them as full members of the CEGs.

## **10.0 Representatives from agencies in the CEG to attend emergency operation centres**

- 10.1 Emphasise the importance of the liaison role when there is a declared CDEM state of emergency:
  - 10.1.1 For services such as Police, FENZ, Ambulance, iwi, DHBs, and
  - 10.1.2 Ensure they are represented at the activated operation centre following a catastrophic event (such as a large earthquake) or when it is activated to respond to a developing event (such as a weather event).

# Chapter Seven: Intelligence

## Introduction

In the immediate aftermath of a disaster a range of critical needs emerge: food, water, shelter, and the need to locate family. In order to act effectively and efficiently involved entities need accurate information.

After a major disaster, all that was known about that community may no longer be true. Incoming information needs to be verified in order for it to be reliably acted upon. For large scale events essential intelligence is required from a range of sources including disparate IT systems and platforms.

CDEM intelligence capabilities in emergency struggle with the sheer speed and volume of information during an emergency response. Systems for situational awareness/intelligence sharing and dissemination need to be better coordinated and more agile. A Common Operating Picture provides a detailed, accurate and comprehensive view (single source of truth) of the unfolding situation that includes management of the hazard and dealing with the consequences.

## What we found

Technology is advancing rapidly but the struggle to synthesize vital intelligence from many sources into one common operating picture is a challenge for most jurisdictions at present. Most find that the latest developments in this field are not fully mainstreamed into emergency operations technology applications. The constant updating and refining of improvements is another source of challenge.

All of the key response agencies gather essential information - yet current systems do not link easily to enable a full situational report. In recent emergencies the Group Controller has experienced frustrations when requesting information from other agencies. Very little has been forthcoming – there was no automated feed of information into the system.

### Common Operating Picture and separate systems

New Zealand's intelligence infrastructure and hardware has not been sufficient to deliver an accurate and comprehensive common operating picture during recent large scale emergencies.

The agencies with situation awareness systems (fire, police, health, defence, for example) have invested considerable resources in their own online systems and it is likely that they will be reluctant to invest further resource in a shared system. None of these existing models would appear to be the multi-agency answer.

There is no current agreement between the core agencies on what information forms the common operating picture (e.g. lifelines information, where cordons are, isolated geographical areas, welfare needs) and how information from multiple sources can be drawn together to give a common picture.

There is some interest in the Victorian Emergency Management Common Operating Picture (EM-COP) which was originally developed by the USA's emergency management agency (FEMA). However, the concept will need to be demonstrated and socialised with agencies.

### National Crisis Management Centre (NCMC aka the Bunker)

The Bunker is outmoded and no longer fit-for-purpose. Its physical layout alone inhibits working together with appropriate technology to achieve a common operating picture. It is difficult for staff to connect to their work IT systems. The Bunker also lacks sufficient GIS capability and other critical analytical capability to evaluate strategic information.

Most of the key response agencies' national coordination centres are significantly more technically advanced than the NCMC.

Unnecessarily restrictive security classifications prevent access to important situation information and decision making.

We understand that MCDEM has been tasked with scoping the feasibility of updating the Bunker so that it can continue to function moderately well in the short to medium term. This includes scoping the purpose and functionality required from the NCMC in the future. Work is also underway for an alternate NCMC in Auckland.

The Crisis Coordination Centre (CCC) is the Australian Government's periscope into everything that is happening around the globe [and internally]. It is an all-hazards, 24/7 facility with representatives from a range of Australian Government departments, including the Bureau of Meteorology and Geoscience Australia. It provides the whole-of-government picture to decision makers during times of crisis, whether it is a natural disaster or a security incident. The CCC also coordinates physical Australian Government assistance during disasters and emergencies and manages the National Security Hotline—the single point of contact for the public to report suspicious activity.<sup>15</sup>

### EMIS

MCDEM and Groups use the Emergency Management Information system (EMIS) - a software tool – when managing civil defence emergencies. It is a workflow system, aimed at managing requests, tasks and resources, logging information, and the collation and filing of developed datasets such as action plans and situation reports. It is not an all-of-government system. EMIS does not create a common operating picture. EMIS is currently being upgraded to a new platform.

Submissions indicated that EMIS is often confused with IT systems that provide a common operating picture. Several references were made to EMIS as unfit for carrying out IT functions that it was never designed to perform. This lack of clarity on its role has resulted in EMIS being considered unfit for purpose – however other feedback, from those who use it regularly in response situations, consider it to be an effective programme for recording resource demand and supply in an emergency.

### 24/7 monitoring, alerting, and warning of events

The current system of monitoring, alerting and warning has developed in an ad hoc way, over time, to meet individual agencies legislative and operational responsibilities.

There are a number of 24/7 'awake' centres across a range of agencies. New Zealand's Rescue Coordination Centre (RCCNZ operated by Maritime NZ) is one. NZ Transport Agency has another. New Zealand Defence also has staff awake during the night.

Both MCDEM and GNS Science have a duty roster of people to perform key roles who will be woken if an event occurs during the night. The MCDEM Duty Team consults with GNS Science (for geological

---

<sup>15</sup><https://www.ag.gov.au/EmergencyManagement/Emergency-management-capability>

related emergencies) and assesses information about the hazard risk, decides appropriate action (such as issuing warnings), issues the information via multiple channels and commences a response. By not having an awake duty team, delays with communication of warnings and establishing a response are inevitable.

There is some support for a centralised, staffed multi-agency, 24/7 operating centre in New Zealand, but the next stage requires a robust assessment of needs and costs to justify such an investment.

NZ's tsunami alert is behind international best practice. Currently Geo-Net provides earthquake information to a panel of experts convened by GNS Science. These experts then consult and agree on the risk of a tsunami and provide a stream of advice to MCDEM who then decides whether or not to issue a public warning. This process is shortened for local source tsunamis. In other countries (such as Japan, Sri Lanka and Singapore) tsunami forecasts are handled by integrating three different levels of information technology: trans-ocean modelling, coastal sea modelling and coastal flood modelling. At present in New Zealand these three system tiers operate virtually independently. This is unsatisfactory when emergency coordination is vital.

This situation may not be such a significant issue for slowly developing emergencies such as floods, cyclones and tsunamis that result from a distant earthquake such as in Chile. However it is a source of concern for tsunamis that result from seismic activity in the region near our shores, for example the Kermadec trench. In this scenario urgent response will be required from many Groups in order to avoid large scale loss of life.

Tsunami risk is a very real threat to safety of life in New Zealand. New Zealand has experienced about 10 tsunami of five metres or more since 1840. Recent tsunami research has presented a mixed picture. Parts of our coast are exposed to greater tsunami hazard than previously thought, while the hazard in other coastal regions is the same or less. Focusing on those that take less than three hours to reach here suggests that one may occur in New Zealand about every 40 to 50 years on average. So it is likely that at least one will occur in the lifetime of most New Zealanders.<sup>16</sup> The 2004 Boxing Day tsunami in the Indian Ocean reached heights of nine metres. A five metre tsunami would cause significant damage to a coastal community.

## Science

The November 14 earthquakes revealed a number of pressure points for GNS Science post a significant natural disaster. There was a tendency for ministers and the media to seek information direct from GNS Science on seismic risk, rather than through established CDEM communication channels such as PIM.

## Evaluation

The intelligence function needs the capacity and tools to do more than just receive, store and show data. It needs to be able to generate useful robust, accurate and verified information to guide response and recovery decisions.

The Bunker is falling behind best practice. Yet when an all-of-government response is called for, following the activation of the national security system, it is expected that this will be led out of the

---

<sup>16</sup> GeoNet report cited on MCDEM website

NCMC. As a result of these shortcomings, we think it unlikely that any other lead agency would run an event from the Bunker. It needs further investment to continue functioning effectively.

We note that any solution towards enhancing the Bunker and/or a common operating picture will involve significant investment. Further, the creation of a common information management system – or a common operating picture – would likely require a Cabinet decision. There is obvious benefit in a common operating model for New Zealand being adopted. Some would also say an urgent need.

While DPMC as a central agency has indicated strong support for the creation of a common operating picture, we note the challenges set out above. We recommend giving priority to the work needed.

We think there is benefit in looking to use and integrate existing 24/7 capabilities to provide intelligence and assessment of developing or shock emergencies (with an all hazards and risks perspective). That may mean aligning processes and procedures across agencies to reduce duplication and improve coordination, drawing on the respective strengths and core business of those organisations. We also suggest investigating the benefit of using the new national emergency management facility as part of the 24/7 operation.

The Crown Research Institutes (CRIs) have a range of valuable capabilities (including resilient infrastructure and telecom capacity) with an interest in contributing more. We note that there are cost implications. We regard accessing science expertise as an essential element of effective response and recommend including science as appropriate into the 'fly-in' team.

#### **United Kingdom embeds science advice into emergency response**

The Scientific Advisory Group for Emergencies (SAGE) ensures that timely and coordinated scientific advice is available to inform disaster response decision making. SAGE includes experts from within government and leading specialists from the fields of academia and industry. The Group is chaired by the Government's Chief Scientific Adviser or a departmental Chief Scientific Adviser.

SAGE has developed methods for getting science advice to both national and regional levels of response. Sometimes this is an incident presence and on other occasions advice is accessed remotely.

The rationale for this emphasis on science advice is that effective emergency management and informed decision-making relies on leaders having access to the best available advice in a timely fashion. The guidance focuses on the coordination of scientific and technical advice to inform strategic UK cross-government decision making during the emergency response and recovery phases.

## **Recommendations**

We recommend that Ministers:

### **1.0 Establish a new national emergency management facility (replacing the Bunker) with a fit-for-future physical layout and technological functionality**

- 1.1 Enable a national emergency to be controlled and managed from the new facility.
- 1.2 Provide for all current CIMS functions, along with a common operating picture and strategic communications.
- 1.3 For national resilience, provide for two facilities and/or easy transfer of base operations.
- 1.4 Maintain effective technological links with other operating centres (Groups, Police, FENZ, Defence, Ministry of Health, and Transport for example).
- 1.5 Systems to be adaptable so that all central government organisations can effectively operate out of the central facility if required.

## **2.0 Invest in the technology to ensure a fit-for-purpose Common Operating Picture**

- 2.1 Investigate technology needed for a Common Operating Picture based on international best practice models as a strong contender for New Zealand's common operating model.
- 2.2 Expect all entities with emergency operations functions to collectively solve the challenge of cross agency systems to share intelligence, and situational assessment.

## **3.0 Establish an integrated 24/7 operation for the monitoring, alerting and warning of emergencies**

- 3.1 Investigate the benefit of using the new national emergency management facility (see rec 1.0 above) as part of the 24/7 operation.
- 3.2 Utilise and integrate with existing 24/7 capabilities to provide intelligence and assessment of developing or shock emergencies (with an all hazards and risks approach).
- 3.3 Increase the speed by which alerts are provided and distributed, particularly in regard to simplifying or shortening current practice and providing timely and geographically accurate tsunami warnings.

## **4.0 Recognise the importance of science intelligence as part of situational awareness:**

- 4.1 Develop an expert group based on the UK SAGE model.
- 4.2 Enable relevant science capability to be embedded as part of the fly-in team.

# Chapter Eight: Information and Communication

## Introduction

Maintaining public trust and confidence through effective communications is important. The time taken to access up-to-date information on the current emergency, and the way that information is gathered and disseminated were two issues at the forefront of the Minister's concerns at the outset of this review.

In New Zealand there is a principle that in an emergency people should prepare to look after themselves in their own home as long as they are able to. Public information helps people both prepare and know what to do in an emergency. And the public also needs up-to-date information during emergencies.

The Chapter covers the communication of emergencies, to the communities affected, the wider public and also to the spokespersons who the public look to for assurance and information.

The media environment has changed in the past five years. Twitter, Facebook and other forms of social media have become primary sources of information for the public. People are increasingly turning to these sources of information in an emergency. Traditional media sources have been impacted by this societal change and those that remain constantly need to find a fresh news angle in order to survive.

Preparing and sharing information about the response directly to the affected public (via social media and other channels) is the primary function of the information desk. Community liaison, media enquiries, information and warnings, and supporting response spokespeople are also part of the role description. At the Group level, the PIM role is commonly carried out by people from local authorities who have been assigned this function. They may have a communications role in their local council and they may have received some relevant training.

## What we found

Recent events highlight a significant gap between what communications professionals are expected to deliver during an emergency or event, and the resources and capacity that is currently available through the PIM function. There are commonly too many points of liaison for a small communications team to handle effectively and efficiently. When a response involves multiple agencies there is inevitable complexity that requires an equivalent escalation in communications coverage.

Having a stream of information that has been officially been cleared and signed-off (commonly referred to as official information) cannot consistently meet the pace of media dialogue and social media activity. It is important to be clear where official comment will come from.

### Public information and preparedness

We heard from Groups about the importance of public information before the event to build community resilience and support emergency preparedness. Having well prepared communities and households, with a good understanding of what to do in an emergency, was seen to help the effectiveness of the response.

## Spokesperson

During recent emergencies it was clearly challenging to maintain public trust and confidence when social media was so rapid, random, and very difficult to control. A dimension of this is that suddenly a 'media star' will become the go-to person for the media. This person may not be the official spokesperson, nor have accurate information on which they base their comment and advice.

We are of the strong view that those who respond to media questions must be well briefed and supported by people who have considerable experience in this field. It is difficult for a Controller to coordinate an emergency response and also manage the media interface.

In the past where a Controller has tried to do both, it hasn't worked (for example initially in Christchurch in 2011). Although Mayors are commonly designated or self-appointed spokespeople, the minister, Director CDEM, local MPs, Group Controllers, emergency services, NGOs may all be asked for comment by many media outlets (including international). Keeping track across the multiple layers and access points for media commentary can be challenging. Any spokesperson needs advice on all the different media channels and what other people are saying to the media.

Mayors have an elected community leadership role and are commonly sought for comment during local emergencies. However the range of often detailed information that media may have questions about, due to their sweeping of social media, is vast. The spokesperson increasingly needs to recognise and value the support of a skilled media strategist as well as technical information from the Controller

## Strategic communications

More pressure has been put on politicians and senior officials to be ready to defend and 'front-foot' the unfolding disaster. Managing the full onslaught of media attention across all channels has become a more complex task. We have found increasing recognition of, and respect for, strategic communications expertise to support spokes people.

Strategic communications support to Ministers to date has been ad hoc. It has involved casting around to see who is available among the core of recognised communications experts (known at central government level). Seven years of significant emergencies has demonstrated that the strategic communications role, when in place, has provided much needed advice to the Mayor (usually the spokesperson) the Minister and the Director. The role has been most effective when strategic communications support has been available both in central government, Wellington, and on the ground at the site of the emergency.

## Public Information Management

We asked Controllers and local authorities, who had managed recent events, how the PIM role had worked. People in the PIM role are generally assigned by the collective Group or a territorial local authority. While there are some very capable people in the role in some areas, in some emergencies the people assigned to the PIM function may never have done this task before. PIM is further discussed in the capability chapter. Having an inexperienced person in the role has caused delays and frustrations in some recent responses.

## Working with the media

In an emergency, the public will turn to channels they know and trust. We found that Radio continues to play a fundamental role in the early stages of recent emergencies. However for some in the community their preferred source of information is increasingly social media – a fact that needs to be

recognised in a communications strategy. Failure to do so will leave a void that others (for better or worse) will fill.

Some important media streams may have been forgotten (e.g. iwi radio). Access to information for Māori would be improved through better utilisation of Māori media including iwi radio, and social media networks of iwi, and of iwi and Māori providers.

### Use of technology in communications

Some progress has been made in the use of new technologies to support alerts and warnings. MCDEM has been working on a cell broadcasting alert system that is due to 'go live' by the end of 2017. The alert system is a 'push' system. It enables messages to be sent to all cell phones in a geographical area. The cell broadcasting system will be used by Police, FENZ, MPI, Ministry of Health, MCDEM and Groups and the system will require ongoing resourcing and a dedicated 24/7 monitoring and warning centre to maximise its potential.

There is little commonality between IT systems of the various councils and, across government, organisations are slow to change practices that have not worked over repeated responses. The different communication needs at local, regional and national levels are not widely understood across the sector.

### Evaluation

There are clearly good developments occurring in technology but also some need for improvement. The importance of well-resourced social media capacity for gathering intelligence and managing a response is high and growing. Social media advances have demonstrated the need to be pro-active and ensure public trust and confidence is maintained and people have the right information to assist them with their personal actions during an emergency. Active monitoring of social media can add to the intelligence to support the common operating picture (refer Chapter Seven).

### PIM role

The PIM function needs to ensure timely, consistent, and proactive use of the range of appropriate channels (e.g. social media, online, radio, print, TV).

In particular, this needs to include capability for managing and utilising social media. There are a number of people with a high level of PIM training around New Zealand and their expertise should be recognised. We include their presence in the recommended 'fly-in' team discussed in Chapter Six.

### Spokesperson

It is important to provide a good communicator as spokesperson. Logically we would expect this role be filled by whoever the impacted community elected to lead them. This fits with our recommendation on the role of the mayor as primary person to declare a state of emergency (see chapter 3). In a modern media context the spokesperson needs the support of a senior and experienced communications practitioner who can brief and counsel them.

### Strategic communications

When deployed in recent large emergencies, the strategic communications specialist has complemented the PIM function. The strategic communications person will also advise when a range of other spokespeople are needed to complement the elected role. This may include scientists with expertise relevant to the specific type of hazard.

We consider that strategic communications support should be deployed immediately for all sudden onset emergencies such as earthquakes, and other disasters depending on scale. This role would complement the local PIM function. CIMS should recognise strategic communications expertise as an essential element of effective response.

The strategic communications capability already exists across government and within some private companies. The central government 'Head of Communications Group' is a natural location to support a database of people with capability and experience and the means of rapid deployment.

## Recommendations

We recommend that you:

### **1.0 Confirm local Mayor as primary spokesperson**

- 1.1 Provide the mayor with supported strategic communications advice
- 1.2 Require Group plans to identify arrangements for a regional spokesperson when managing an event that crosses territorial boundaries.

### **2.0 Recognise Strategic Communications as an essential element of effective response**

- 2.1 Deploy strategic communications support immediately for all sudden onset emergencies such as earthquakes, and other disasters depending on scale.
- 2.2 Provide communications advice and support for the Minister(s), local MPs, Mayors and Chief Executives/Director.
- 2.3 Liaise with their counterparts in other agencies (such as Police, Fire, MFAT, and NZDF) to shape a comprehensive situation report for national and international media.
- 2.4 Work from both the NCMC and 'on the ground', to cover strategic communications needs.

### **3.0 Include and deploy trained and experienced PIMs and Strategic Comms in 'Fly In Team'**

- 3.1 Allocate the task of maintaining the database of people with strategic communications, and other specialist communications capability, for deployment as part of the fly-in-team.
- 3.2 Resource capability for social media monitoring and use.

### **4.0 Ensure timely, consistent, and proactive use of the range of appropriate media channels both for communication, and for gathering intelligence.**

# Appendix 1: Terms of Reference

## Purpose

This review will provide advice to the Minister of Civil Defence on the most appropriate operational and legislative mechanisms to support effective responses to natural disasters and other emergencies in New Zealand.

The purpose is to ensure that New Zealand's emergency response framework is world leading, and well placed to meet future challenges. In light of recent events it is appropriate to see how we can further enhance and strengthen the current system.

## Context

A series of recent hazard events and emergencies in New Zealand have resulted in wide spread reflection on whether the current operational and legislative settings for responding to natural disasters and other emergencies are fit for purpose.

Responsibility for the management of these events lay with three different agencies<sup>17</sup>. The civil defence emergency management sector was however involved in all three responses as either lead or support agency. In all three cases the effectiveness of the civil defence emergency management sector was called into question resulting in a loss of stakeholder, public and Ministerial confidence in the response system.

The National Security System, of which civil defence emergency management is a part, has a range of lead agencies that operate under different legislative mandates, depending on the hazard type. The complexity of the system is well understood by those agencies that operate within its framework, but are not widely publicised or understood by the public<sup>18</sup>.

Many lessons from the Canterbury earthquakes of 2010 and 2011 and other events have been successfully embedded into the operation of the current civil defence emergency management system. However there has been no significant review of the organisational structures, roles and decision-making powers, within which responses are orchestrated. It is timely to take a wide look at how the sum of those parts work together. In particular, to consider whether any changes to settings could optimise the civil defence emergency management system's performance in the response phase.

<sup>17</sup> August 2016 Hawkes Bay gastroenteritis outbreak (lead agency Health); 2 September 2016 East Cape earthquake and tsunami (lead agency Civil Defence Emergency Management); 14 November 2016 Kaikoura earthquake and tsunami (lead agency Civil Defence Emergency Management); and 13 February 2017 Port Hills fire (lead agency Selwyn Rural Fire Authority).

<sup>18</sup> November 2016, Controller and Auditor General report Governance of the National Security System.

## Project Definition

### The problem

The purpose of the review is to ensure that New Zealand's emergency response framework is world leading, fit-for-purpose, and well placed to meet future challenges.

The current organisational structures, roles and decision-making powers in the civil defence emergency management response system need to align with the expectations for system performance.

Recent events tested New Zealand's response framework, and its effectiveness in supporting decision making, information sharing and operational capability. In particular it has been noted that:

- The underlying principle of "act locally, coordinate regionally, support nationally" may not be suitable in all circumstances.
- Decisions are not necessarily made by adequately skilled and experienced people, mandated at the appropriate level of government, and supported by the best information possible in the circumstances.
- Volunteers may not be adequately supported by a professional emergency management force.
- Information is not always readily available to decision makers on the scale, complexity and evolving nature of the emergency, to determine the capacity and capabilities required for the response effort.
- There is a need for timely, consistent and accurate communication to the public.
- Response capabilities are not necessarily deployed as promptly and seamlessly as possible, taking advantage of economies of scale and the experience of senior responders.

In summary, the operational and legislative settings within the system may not be performing optimally to meet current and future needs, and the role that New Zealanders need it to play.

### Scope

The work will examine:

- The current devolved decision-making model from central to local government, and framework of lead and support agencies to manage response to emergencies arising from specific hazards.
- Decision making and chain of command, including:
  - who has the power to declare a State of Emergency, and
  - whether there is a need for an interim mechanism to manage a localised event with significant consequences or that could evolve into a state of local emergency or a state of national emergency.
- Response capability and capacity.
- Whether legislative changes are required to the Civil Defence Emergency Management Act 2002 (and other legislation related to emergency response).

**Outcome 1:** The emergency response system is fit for purpose and aligns with stakeholder expectations, taking account of the need to prioritise preventing death, injury, and property damage, and the fast-moving nature and uncertainty of emergencies.

**Outcome 2:** New Zealand has the appropriate response capability and capacity for civil defence emergency management responses.

- The system capacity supports the availability of appropriately skilled and responsive resourcing, regardless of the location and scale of the emergency.
- Appropriate protocols exist to enable supporting agencies to swing promptly into action.
- Agencies with specialist capabilities (such as logistics, aerial surveillance and interpretation) are knitted into the fabric of a response.
- Business continuity across the whole of government supports an effective response and prompt recovery.

**Outcome 3:** Clearer definition of who determines the need for and declares a state of emergency and at what point the Director Civil Defence Emergency Management can step in to declare a state of emergency.

- A single lead role across any geographical area affected by natural disaster
- The purpose and consequences of declarations of states of emergency are clear
- Appropriate interventions and escalations are available.

**Outcome 4:** The chain of command and control, coordination, and decision making during an emergency is effective and appropriate.

- There is a clear operating model and chain of command and control and coordination during response, including the recognition of lead and support agencies.
- The system enables decisions to be made quickly, by appropriately skilled and experienced people, mandated at the right level, within the most appropriate agency and incorporating the best available information.
- All participants in the system understand the operating picture and their respective roles and responsibilities, including how these might change over the course of the response or as the event unfolds.

**Outcome 5:** Information flows into, across, and out of the emergency response system effectively, allowing timely and accurate communication to Ministers; agencies; officials; stakeholders with particular interests; and to the public during emergencies.

- Recognition of the modern news cycle – immediacy of social media and power of factual decisive information delivered as speedily as possible
- Stakeholder needs are understood (what information is required; where and how to gather the information, providing it at the right time and in the right format).

- Official information maintains pace with media dialogue and social media activity.

The work will not examine the current legislative framework for hazard risk assessment and management set out in other legislation, for example the Resource Management Act 1991, but may make reference to any further work or consideration that may be necessary to better fit other Acts to enable resilience and preparedness.

**Consultation and Engagement**

The chair of the Technical Advisory Group is expected to agree with the Minister of Civil Defence the overall process, including matters of consultation and engagement. There is significant benefit in direct engagement with key stakeholders, as their contribution will add value to the Technical Advisory Group's advice. This should include providing for engagement with local government, emergency services, relevant government departments, and iwi and Māori. The means of consultation and engagement will need to reflect the time available and it is recognised that engagement will commonly be through the chair and the secretariat.

**Key Deliverable**

A review document examining the current operational and legislative settings for responding to emergencies and the recommended options for change.

The document will be provided to the Minister of Civil Defence no later than three months from the date of the agreement to these Terms of Reference.

## Governance

**Sponsor**

Minister of Civil Defence

**Technical Advisory Group**

A Technical Advisory Group made up of:

- Roger Sowry, as Chair;
- Benesia Smith MNZM, independent consultant;
- Malcolm Alexander, Chief Executive, Local Government New Zealand;
- Assistant Commissioner Mike Rusbatch, New Zealand Police;
- Deputy National Commander Kerry Gregory, New Zealand Fire Service;
- Major General Tim Gall, New Zealand Defence Force;
- Sarah Stuart-Black, Director, Ministry of Civil Defence & Emergency Management.

**Project Team and Secretariat**

The project team and secretariat is headed by Jeremy Corban.

## Appendix 2: Current Arrangements

This appendix outlines the current policy, legislative and institutional arrangements for responding to emergencies in New Zealand.

### Policy

Emergency management in New Zealand is seen as a part of the national security system. National security is the condition which permits the citizens of a state to go about their daily business confidently free from fear and able to make the most of opportunities to advance their way of life. It encompasses the preparedness, protection and preservation of people, and of property and information - both tangible and intangible.

New Zealand takes an 'all hazards – all risks' approach to national security. This approach acknowledges New Zealand's particular exposure to a variety of hazards and threats, any of which could significantly disrupt the conditions required for a secure and prosperous nation.

The New Zealand system also emphasises the importance of resilience, for example the ability of a system to respond and recover from an event (whether potential or actual).

To achieve this, New Zealand takes an integrated approach to managing risk. Known as the 4Rs this encompasses:

- Reduction
- Readiness
- Response
- Recovery

See glossary for definitions.

### Legislative and institutional arrangements

Management of response involves local and national agencies and at least 11 relevant Acts.

The main Act relevant to this review is the Civil Defence Emergency Management Act 2002 (CDEM Act). The CDEM Act was intended to ***"ensure that New Zealand has the appropriate structures, expertise, and resources to manage disasters at local and national levels"***<sup>19</sup>. The CDEM Act has a very wide definition of 'emergency' and provides additional powers in support of other Acts.

---

• <sup>19</sup> Third reading speech Minister of Civil Defence 8 October 2002

---

## **The Purpose of the CDEM Act**

The purpose of the Act is set out in [section 3](#) and covers:

- Improve and promote the sustainable management of hazards in a way that contributes to the social, economic, cultural and environmental well-being and safety of the public and the protection of property.
  - Encourage and enable communities to achieve acceptable levels of risk by identifying risks and applying risk reduction management practices.
  - Provide for planning and preparation for emergencies and for response and recovery in the event of an emergency.
  - Require local authorities to coordinate CDEM through regional groups across the '4Rs' and encourage cooperation and joint action between those groups.
  - Integrate local and national CDEM planning and activity through the alignment of local planning with a national plan and strategy.
  - Encourage the coordination of emergency management across the range of agencies and organisations with responsibilities for preventing or managing emergencies.
- 

## **The CDEM Framework**

The Act is the overarching element in the CDEM Framework. Other elements include:

- CDEM Regulations made under the Act
  - National CDEM Strategy
  - National CDEM Plan 2015, and supporting Guide
  - CDEM Group Plans
  - Director's Guidelines on various aspects of CDEM
  - Other legislation relevant to CDEM.
- 

## **The role of the Director Civil Defence Emergency Management and MCDEM**

The Act provides for the appointment of a Director CDEM, whose functions (set out in [section 8](#)) include:

- advising the Minister of Civil Defence
- identifying hazards and risks of national significance
- coordinating national implementation and promotion of civil defence emergency management
- monitoring and evaluating the national civil defence emergency management strategy
- developing, monitoring and evaluating the National CDEM Plan, technical standards and guidelines
- monitoring performance of CDEM Groups
- promoting civil defence emergency management. and
- directing and controlling the resources available for civil defence emergency management during a national disaster.

The Director CDEM is also the director responsible for the Ministry (MCDEM), an executive role in addition to the statutory role.

**MCDEM** is a business unit of the Department of the Prime Minister and Cabinet (DPMC). It is not mentioned in the CDEM Act. The functions and powers of the Director in the Act are enabled by the Ministry. The Ministry is also responsible for managing the operation of NCMC; the 'lead agency' for particular hazards – specifically for natural disasters (earthquake, tsunami, flood, other weather) for infrastructure failure, and the lead agency, for the coordination of welfare services aspects of emergency response and recovery.

---

### Civil Defence Emergency Management Groups

Civil Defence Emergency Management Groups (Groups) are a core component of the Act. A Group is a consortium of the local authorities (regional and territorial) in a region, working in partnership with emergency services, to undertake CDEM functions within their region.

There are 16 Groups in New Zealand, generally following regional or unitary council boundaries.

The functions of Groups include.

- To identify and understand local hazards and risks and implement cost effective risk reduction measures.
- To appoint at least one suitably qualified and experienced person to be a Group Controller, who would (in the event of an emergency) have access to extraordinary powers under the Act to manage an effective response.
- To provide, or arrange to provide, suitably trained people and an appropriate organisational structure, for effective CDEM.
  - A number of Groups have initiated a shared services approach, which to different degrees centralises and coordinates activities across the Group area. Many have Emergency Management Offices which oversee functions under the CDEM Act.
  - MCDEM is developing an integrated training framework with local government to enhance CDEM staff competency.
  - Some funding for CDEM training comes from the Tertiary Education Commission (\$1m for emergency management training each year from Adult Community Education funds).
  - Professional development and training for controllers is available through Massey University and Auckland University of Technology (AUT). Auckland Council sponsor a separate course for their controllers.
  - This training is complemented by the national CDEM exercise programme that MCDEM manages – a ten year programme involving central and local agencies.
- To provide, or arrange to provide, other resources necessary for effective CDEM.
- To undertake response and recovery activities.
- If possible, to assist other groups implement CDEM when assistance is requested.
- To promote awareness of the Act and related legislation, and monitor and report on compliance.
- To prepare and implement a Group Plan. Failure to comply with the Plan is an offence under the Act.

(See [section 17](#) for more details on functions, and [section 26](#) for appointment of Group Controllers, and [section 85](#) for Group powers during a state of emergency.)

Groups are established as joint standing committees (of local authority mayors and chairpersons or their delegates) under the Local Government Act 2002. The CDEM Act 2002 gives direction on voting rights and funding liabilities but remains flexible in other administrative aspects to reflect varying Group circumstances.

It is important to note the following points about Groups from the Act.

- Member local authorities have equal status.
- As part of the Group each mayor and regional chairperson agrees the plans under which the Group operates
- Individual local authority autonomy remains - mayors still have the right to declare an emergency within their territorial boundary; and each local authority (regional and territorial) is responsible for planning and provision of CDEM within its area, in addition to being part of the Group.
- Groups have discretion in regard to the split of functions between regional and district councils, and the contribution respective councils could make.
- If a territorial authority is split by the boundary between two regional councils, the territorial authority can choose which Group it wishes to belong to.
- Groups can choose to operate collectively, with two or more Groups acting as a single Group.
- Formal linkages are required to be made with emergency service providers.

---

### Group Plans

Under the Act, every Group must prepare and approve a Civil Defence Emergency Management Plan (CDEM Plan). These plans must state and provide for (refer [section 49](#) for full list):

- the local authorities that have united to establish the Group
- the hazards and risks to be managed by the Group
- the CDEM necessary to manage the hazards and risks
- the objectives of the plan and the relationship of each objective to the National CDEM Strategy
- the apportionment between local authorities of liability for the provision of financial and other resources for the activities of the Group, and the basis for that apportionment
- the arrangements for declaring a state of emergency in the area of the Group
- the arrangements for co-operation and co-ordination with other Groups.

The Act requires that Groups consult with the public over the development of their Group Plan and that interested persons may make submissions about the proposed plan to the Group. Each Group Plan must be reviewed after five years in operation.

- Link to [Current Group plans](#) from the MCDEM web site.

It is an offence to fail to comply with a requirement in a civil defence emergency management plan.

---

### An Emergency, Declarations and associated Powers

The CDEM Act defines an emergency as a situation that:

- is the result of any happening, whether natural or otherwise, including, without limitation, any explosion, earthquake, eruption, tsunami, land movement, flood, storm, tornado, cyclone, serious fire, leakage or spillage of any dangerous gas or substance, technological failure, infestation, plague, epidemic, failure of or disruption to an emergency service or a lifeline utility, or actual or imminent attack or warlike act; **and**
- causes or may cause loss of life or injury or illness or distress or in any way endangers the safety of the public or property in New Zealand or any part of New Zealand; **and**

- cannot be dealt with by emergency services, **or** otherwise requires a significant and co-ordinated response under this Act.

The Act provides for local authority delegated representatives, mayors, or the minister, to declare a state of local emergency. The minister also may declare a state of national emergency. Declared emergencies last seven days, although they may be extended multiple times or terminated at any time.

- The Group must appoint one of its members (i.e. a mayor or chair of the regional council) to be authorised to declare a state of local emergency for its area. The area is the geographic scope of all the district and regional (or unitary) councils that are collectively covered by the particular group of councils. Commonly, the chair of the regional council is the appointed person.
- Notwithstanding that, any mayor can declare a state of local emergency for their district. This is one of the few real powers that mayors have by way of the position.
- The Minister of Civil Defence also has authority to declare a state of emergency over the whole of New Zealand or any part (down to a ward). This power has been used once, following the Christchurch 2011 earthquake.

Guidance or factors to consider may be in the relevant Group Plan for the area. The Director guidance is available on the MCDEM web site [DGL13/12]. Making a declaration because the public may derive assurance that everything is in hand is not specifically part of the current guidance.

Emergency powers under the CDEM Act 2002 enable Groups and Controllers to, among other things:

- close or restrict access to roads or public places and regulate land air and water traffic
- remove or secure dangerous structures and materials
- provide rescue, first aid, food, shelter etc.
- conserve essential supplies & regulate traffic
- dispose of dead persons and animals
- enter onto premises
- evacuate premises/places
- remove vehicles, vessels etc.
- requisition equipment, materials and assistance

Refer [section 85](#) for Group powers during a state of emergency, and Part 5 of the Act (particularly sections 86 to 92) for powers of Controllers.

Importantly, the CDEM legislation is not the only legislation whereby an 'emergency' of some sort triggers extraordinary power. Other Acts also provide powers during emergencies, with the definition of 'emergency' depending on the matter and scope of the related powers. Examples include 'emergency works' under the Resource Management (1991), 'drinking-water emergency' under the Health Act 1956, response to marine oil spills under the Maritime Transport Act (1974) and 'hazardous substances or new organisms emergency' (HSNO Act 1996), and powers under the Fire and Emergency New Zealand Act 2017.

---

#### **Director CDEM and Minister of Civil Defence Powers**

The Act provides additional powers to those available during a state of emergency.

- Regulations can be used to prescribe, amongst other things, the level of competence to be met by persons carrying out specified functions, performance standards, training systems, and regulating

activities that may impede or adversely affect the implementing a civil defence emergency management plan ([section 115](#)).

- If a CDEM Group or person fails to commence or to complete the performance of a function or duty under the Act the Director can complete the performance of that function or duty and recover the cost from the relevant CDEM Group or person ([section 75](#)).
- In certain situations the Minister may direct the Director or any CDEM Group or person to perform any function or duty or power conferred on that person or Group under the Act (or cease to perform etc) ([section 84](#)).

---

## Command, Control, and Coordination

Definitions (from CIMS)

- **Command** (authority within an agency) is executed vertically, and includes the internal ownership, administrative responsibility, and detailed supervision of an agency's personnel, tasks, and resources. Command cannot normally be exercised outside an agency.
- **Control** (authority across agencies) is executed horizontally, and is the authority to direct tasks to another agency, and to coordinate that agency's actions so they are integrated with the wider response. Control authority is established in legislation or in an emergency plan. This is taken as the authority to task another agency towards a certain outcome (or example to achieve a managed evacuation). It is not control over the actual resource – such as personnel or assets.
- **Coordination**: bringing together agencies and resources to ensure unified, consistent, and effective response. Command and control assist with coordination by defining authority between and within agencies.

### Command

- The authority to command (within an agency/organisation) relies on the agency's hierarchy. The NZDF, police and fires services particularly use the language of 'command'.
- The powers of direction outlined in the CDEM Act from national controller to group controller to local controller can be considered as a command authority within that system. Also the authority from the joint committee (of elected council representatives) down to council executive and staff across all councils is also considered a command authority.

### Control

- The position of (Local, Group, or National) Controller is a statutory role in the CDEM Act under a state of emergency. The extent of authority of the Controller to control in a state of emergency is outlined in the CDEM Act, National CDEM Strategy, the National CDEM Plan Order 2015; and the Group Plans. The Minister of Civil Defence also has control authority in states of emergency.
- The term 'lead agency' is also used to describe the agency with control authority over all agencies involved in the response to an event or hazard. The lead agency for specific events / hazards is identified in Appendix 1 of the National CDEM Plan Order 2015 and in the National Security System Handbook. CIMS notes that '*a lead agency is the agency with a mandate to manage the response to an incident through legislation, under protocols, by agreement, or because it has the expertise and experience.*' The extent of control varies and tends to be limited through legislation. See Chapter 6 for a discussion on the term 'lead agency'.

## Coordination

- The Coordinated Incident Management System (CIMS) 2nd edition provides a framework that agencies can apply in emergency response. It is a guide, not a standard. CIMS functions include controller, operations, logistics, public information, planning, intelligence and welfare.
- Coordination across different entities (local and central government and emergency services) occurs through the national level ODESC and National Crisis Management Centre, Group level Coordinating Executive Group (set up by section 20 CDEM Act), and Emergency Coordination Centres (ECCs) and local Emergency Operation Centres (EOCs).
- References to the involvement of iwi in emergency management coordination and response is varied. There is no reference in legislation.

---

## CIMS

The Coordinated Incident Management System (CIMS) 2nd edition provides a framework of principles, structures, functions, processes and terminology that agencies can apply in both emergency and non-emergency incidents. Events might include public parades and marine mammal strandings through to search and rescue, communicable diseases, mass loss of life and disastrous natural hazard events.

CIMS describes how New Zealand agencies (for example government departments, emergency services, Red Cross) coordinate, command, and control incident responses of any scale. It covers how the response can be structured, provides common terminology, practical guidance such as standard colours for designated jobs, and the relationships between different CIMS functions. Functions/positions include: controller, logistics, public information manager, planning and welfare.

It is the primary reference for incident management in New Zealand. It is a guide and a tool, not a regulation that must be followed. It can be applied with different Acts of legislation - Health, Local Government, CDEM, Fire and Emergency NZ, etc. But, it does not provide guidance on the relationship between CIMS terms and statutory positions in New Zealand legislation, for example Group Controller (CDEM Act) or on-scene commander (Maritime legislation).

---

## Reference to iwi

There is inconsistent reference to the participation of iwi in the key CDEM documents and the role of iwi is different in the various layers of CDEM planning. Current CDEM legislation does not mention iwi.

The National CDEM strategy states: *'Māori have a particular interest in the management of hazards and associated risks, including risks that may be posed to wāhi tapu sites and other sites of significance. It is important that whānau, hapū, iwi and the wider Māori community are involved in CDEM planning. In addition, Māori communities often have important resources for response and recovery, such as marae for use as emergency shelters, and Māori welfare and support services.'*<sup>20</sup>

The National CDEM Plan Order 2015 refers to the role iwi/Māori can play in an emergency as well as the role of Te Puni Kōkiri (TPK) in facilitating and coordinating support to iwi/Māori and providing links between iwi and the emergency management sector.

---

<sup>20</sup> National Civil Defence Emergency Management Strategy 2007

TPK has obligations under the National CDEM Plan to:

- prepare for and deliver welfare services as a support agency
- engage with Māori communities to support meeting their needs during and following an emergency, and
- Work with Government agencies/ Groups to facilitate and coordinate support for Māori requiring assistance.

---

## **Welfare**

Under CIMS, local authorities have responsibility to plan and deliver welfare services (including shelter and accommodation) in an emergency. Each Group has established a welfare coordination group (or committee) which is comprised of welfare and social service agencies including government agencies and is chaired by the Group Welfare Manager.

The welfare coordination group has commonly developed a Group Welfare Plan and, where needed, sub-committees. Various government agencies sit on the committee. TPK is commonly listed as the 'iwi representative' entity on Group welfare coordination groups.

MCDEM currently has the lead for coordinating welfare services across the 4R's (including response).

Animal welfare, domestic and farm, is also part of the welfare function, and the responsibility of the Ministry for Primary Industries.

---

## **Public information and Education**

MCDEM and CDEM Groups promote emergency preparedness during 'peacetime' through public information and education. This helps to ensure that people are aware of and understand the hazards in their area, and know what to do before, during, and after an emergency.

The aim is to help communities be better equipped to take care of themselves and others, relieving pressure on response personnel.

To ensure consistency, this public information often promotes messages and campaign resources developed at the national level, with locally specific messaging and material incorporated as appropriate.

---

## **Intelligence and Situational Awareness**

Decision making for coordination, command, and control rely on shared situational awareness and intelligence.

- At present there is one National Crisis Management Centre (NCMC). When an all-of-government response is called for, following activation of the national security system, it is expected that this will be led out of the NCMC.
- Most agencies involved in emergency response also have their own coordination centres.
- There is no shared system for a common operating picture.
- Many agencies also have 24/7 monitoring and response function, including NZ Police, NZDF, FENZ, the New Zealand Rescue Coordination Centre, ambulance services, utility operators, Met Service and others.

- MCDEM, local government and GNS Science have duty rosters of people on call if an event happens. Duty Teams assess information about hazards, decide actions (such as issuing warnings) and commence a response.

---

## Guidelines

The Act provides the Director with the authority to issue technical standards and guidelines. The purpose of these guidelines is to assist organisations with responsibilities under the Act to properly exercise those responsibilities. The Act requires that CDEM Group Plans 'must take account of' the guidelines, codes, or technical standards issued by the Director ([section 53\(2\)](#)).

The Director has issued guidelines and standards on a range of CDEM – related issues. They are grouped in different series as follows:

- [Director's Guidelines \(DGLs\)](#)
- [Best Practice Guides \(BPGs\)](#)
- [Technical Standards \(TS\)](#)
- [Information Series \(IS\)](#)
- [Supporting Plans \(SPs\)](#)

---

## Other CDEM Related Legislation

Legislation relating to CDEM is not just limited to the Civil Defence Emergency Management Act 2002. A number of other Acts also play a role in CDEM by, for example, regulating activities of particular CDEM participants. They include (but are not limited to) the:

[Biosecurity Act 1993](#)

[Building Act 2004](#)

[Canterbury Earthquake Recovery Act 2011](#)

[Defence Act 1990](#)

[Earthquake Commission Act 1993](#)

[Epidemic Preparedness Act 2006](#)

[Fire and Emergency New Zealand Act 2017](#)

[Hazardous Substances and New Organisms Act 1996](#)

[Health Act 1956](#)

[Health and Safety in Employment Act 1992](#)

[Local Government Act 2002](#)

[Maritime Transport Act 1994](#)

[Public Works Act 1981](#)

[Resource Management Act 1991](#)

| Manawatu-Wanganui | Flooding                | Whanganui District         | 04/04/2017<br>(3 days) | Declared in advance of expected impacts from Ex Tropical Cyclone Debbie   |
| Manawatu-Wanganui | Flooding                | Rangitikei District        | 04/04/2017<br>(3 days) | Declared in advance of expected impacts from Ex Tropical Cyclone Debbie   |
| Bay of Plenty     | Flooding                | Whakatane District         | 06/04/2017<br>(6 days) | Edgecumbe flooding. State of local emergency overridden by Bay of Plenty declaration on 11 April 2017.  |
| Bay of Plenty     | Flooding                | Bay of Plenty              | 11/04/2017<br>(4 days) | Declaration covering the whole Bay of Plenty area in anticipation of heavy rainfall. This overrode previous, more limited state of emergency over Whakatane District. |
| Waikato           | Severe weather          | Thames Coromandel District | 12/04/2017<br>(3 days) | Declared in advance of expected landfall of Cyclone Cook  |
| Bay of Plenty     | Severe Weather          | Whakatane District         | 14/04/2017<br>(7 days) | Declared to enable the continued response to Edgecumbe and the surrounding areas.   |
| Canterbury        | Flooding/severe weather | Timaru District            | 21/07/2017<br>(1 day)  | Declared due to significant rainfall and flooding. Evacuations required   |
| Canterbury        | Flooding/severe weather | Selwyn District            | 21/07/2017             | Declared locally due to flooding and Selwyn River overtopping its banks   |
| Canterbury        | Flooding/severe weather | Christchurch city          | 21/07/2017             | Declared locally due to Heathcote river bursting its banks and flooding in parts of the city  |
| Otago             | Flooding/severe weather | Dunedin City               | 21/07/2017<br>(3 days) | Declared locally and up-scaled to cover three coastal districts in Otago region; roads affected by flooding and evacuations required in low-lying areas               |
| Otago             | Flooding/severe weather | Waitaki District           | 21/07/2017<br>(3 days) | Declared locally and up-scaled to cover three coastal districts in Otago region; widespread flooding and breached banks.  |

## Appendix 6: Glossary of key terms

| Term / Acronym   | Definition   |
|--|--|
| <b>4R's</b>  | <p>The four parts of emergency management, being reduction, readiness, response and recovery ['recovery' is defined in the CDEM Act <a href="#">section 4</a>, and all 4Rs are defined in the National CDEM Plan Order 2015 <a href="#">clause 2</a>]:</p> <ul style="list-style-type: none"> <li><b>a. Reduction:</b> identifying and analysing long-term risks to life and property from hazards, taking steps to eliminate those risks if practicable, and, if not, reducing the magnitude of their impact and the likelihood of their occurrence to an acceptable level;</li> <li><b>b. Readiness:</b> developing operational systems and capabilities before an emergency happens, including self-help and response programmes for the general public and specific programmes for emergency services, lifeline utilities, and other agencies;</li> <li><b>c. Response:</b> actions taken immediately before, during, or directly after an emergency to save lives and property, and to help communities recover; and</li> <li><b>d. Recovery:</b> means the co-ordinated efforts and processes used to bring about the immediate, medium-term, and long-term holistic regeneration and enhancement of a community following an emergency</li> </ul> |
| <b>CDEM</b>  | (Pronounced sea-dim) Civil Defence Emergency Management – a phrase or acronym generally used alongside entities or documents established by, or required by, the <a href="#">CDEM Act 2002</a> .   |
| <b>CIMS</b>  | Refer to <b>Coordinated Incident Management System</b>   |
| <b>Civil Defence Emergency Management (CDEM) Group</b> | <p>A Group established under <a href="#">section 12</a> of the CDEM Act 2002, members being the mayor or chairperson of that local authority or delegate elected councillor</p> <p>'every regional council and every territorial authority within that region must unite to establish a Civil Defence Emergency Management Group for the purposes of this Act as a joint standing committee under clause 30(1)(b) of <a href="#">Schedule 7</a> of the Local Government Act 2002'</p>  |
| <b>Common operating picture</b>                        | An understanding of a situation based on the best available information, shared among all agencies.  |

|   |   |
|---|---|
| <b>Controller</b>                                     | <p>The person in charge of a response element who directs response activities, and fulfils management functions and responsibilities and exercises control.</p> <p>References in this report to a <b>Group Controllers</b> and <b>Local Controller</b> as those who are appointed by the CDEM Group under <a href="#">section 26</a> and <a href="#">section 27</a> respectively of the CDEM Act 2002, and reference to <b>National Controller</b> is a person with functions and powers in a national state of emergency under <a href="#">section 10</a> of the CDEM Act.</p> |
| <b>Coordinated Incident Management System (CIMS)</b>  | <p>(Pronounced sims) The <a href="#">Coordinated Incident Management System (CIMS)</a>, now in its 2nd edition, provides a framework of principles, structures, functions, processes and terminology that agencies can apply in in both emergency and non-emergency incidents.</p>  |
| <b>Coordinating Executive Group (CEG)</b>             | <p>(pronounced keg) CDEM Coordinating Executive Group established under <a href="#">section 20</a> of the CDEM Act 2002, and comprising of generally senior officials from each member local authority, Police, Fire and Emergency New Zealand, and a provider of health and disability services (generally represented by the District Health Board) and other co-opted members.</p>   |
| <b>Declaration</b>                                    | <p>Used as short hand for a declaration under the CDEM Act 2002, refer to <b>state of emergency</b></p>   |
| <b>DHB</b>  | <p>District Health Board</p>  |
| <b>Director</b>                                       | <p>Director CDEM, a statutory position appointed under <a href="#">section 8</a> of the CDEM Act</p>  |
| <b>DPMC</b>   | <p>The Department of the Prime Minister and Cabinet</p>   |
| <b>Emergency</b>                                      | <p>In general, an emergency is a situation that poses an immediate risk to life, health, property, or the environment that requires a significant and coordinated response.</p> <p>It has a specific meaning under the CDEM Act 2002 <a href="#">section 4</a> as it is relevant to the decision to declare a 'state of emergency'. See Appendix 2, Current Approach and discussion under 'An emergency Declarations and associated Powers'.</p>  |
| <b>Emergency Management Information System (EMIS)</b> | <p>(Pronounced e-miss) A software tool and workflow system aimed at managing requests, tasks and resources, logging information, and the collation and filing of developed datasets such as action plans and situation reports. It is supported by MCDEM and used by local government in relation to CDEM activities and events.</p>  |
| <b>Emergency Operation Centre (EOC)</b>               | <p>In this report an EOC refers to a facility, generally operated by a local authorities, which when activated acts as a coordination and control centre for local (as opposed to national) emergency response and</p>  |

|                         |   |
|-------------------------|---|
|                         | support. The term is used in CIMS, and in CDEM guidance, but not in the CDEM Act 2002.  |
| <b>FEMA</b>             | Federal Emergency Management Agency (USA)   |
| <b>FENZ</b>             | Fire and Emergency New Zealand - established on 1 July 2017: the amalgamation of the New Zealand Fire Service, the National Rural Fire Authority, 12 enlarged rural fire districts and 26 territorial authority rural fire authorities.   |
| <b>GNS Science</b>      | <a href="#">Institute of Geological and Nuclear Sciences Ltd</a> (NZ), Te Pū Ao, a Crown Research Institute providing earth, geoscience and isotope research and consultancy services   |
| <b>Group</b>            | Refer to <b>Civil Defence Emergency Management (CDEM) Group</b>   |
| <b>Group Plan</b>       | A statutory document produced by the CDEM Group under the CDEM Act 2002 - <a href="#">section 49</a> set outs its contents.   |
| <b>Intelligence</b>     | <ol style="list-style-type: none"> <li>1. The function that collects and analyses response information, particularly that related to status, hazards, consequential risks, and the context of the incident.</li> <li>2. The collection, evaluation, and analysis of response information, aimed at producing forecasts on how the response may develop</li> </ol> |
| <b>Joint Committee</b>  | A joint standing committee under <a href="#">section 12</a> of the CDEM Act comprising the regional council and territorial authorities within the region.  |
| <b>Lead agency</b>      | This report recognises that there are various definitions. Refer to Chapter Six for discussion  |
| <b>Lifeline utility</b> | Any organisation named or described in <a href="#">Schedule 1</a> of the CDEM Act 2002. This includes airports, ports, railways, and providers of gas, electricity, water, wastewater or sewerage, storm water, telecommunication, roading networks and petroleum products.   |
| <b>Local government</b> | Collectively regional councils, unitary councils, district councils and city councils - a total of 78 in New Zealand. Also called local authorities.  |
| <b>Major incident</b>   | A proposed new status of activity – an incident or event which meets the threshold for initiating a response but does not require extraordinary powers under the CDEM Act 2002. Refer to Chapter 3 for discussion   |
| <b>MBIE</b>             | Ministry of Business, Innovation and Employment   |
| <b>MCDEM</b>            | Refer to <b>Ministry of Civil Defence &amp; Emergency Management</b>  |

|   |   |
|---|---|
| <b>Ministry of Civil Defence &amp; Emergency Management (MCDEM)</b> | The central government agency, a Ministry set up by Cabinet, to give effect to the functions of the Director CDEM. It is responsible for providing leadership, strategic guidance, national coordination and facilitation, and the promotion of various key activities, taking an 'all-hazards approach' across the 4R's.   |
| <b>MSD</b>  | Ministry of Social Development  |
| <b>National Crisis Management Centre (NCMC)</b>                     | A secure all-of-government facility maintained in a state of readiness to manage the national response to emergencies, sometimes colloquially referred to as 'the bunker'.  |
| <b>National Security System Handbook</b>                            | A DPMC produced <a href="#">handbook</a> that sets out New Zealand's arrangements with respect to both to the governance of national security and in response to a potential, emerging or actual national security crisis   |
| <b>NZDF</b>   | New Zealand Defence Force   |
| <b>NZRT</b>   | New Zealand Response Team   |
| <b>OAG</b>  | Office of the Auditor-General New Zealand   |
| <b>Public Information Management (PIM)</b>                          | The function that, during an incident, prepares, distributes, and monitors information to and from the media and public.  |
| <b>Regional council</b>   | A regional council named in Part 2 of <a href="#">Schedule 2</a> of the Local Government Act.   |
| <b>State of Emergency</b>   | Used in this report to refer to the 'state of emergency' that results from a declaration under the CDEM Act 2002. A <b>state of local emergency</b> is declared under section <a href="#">68</a> or section <a href="#">69</a> .<br><br>A <b>state of national emergency</b> can only be declared by the Minister of Civil defence under <a href="#">section 66</a> . |
| <b>TAG</b>  | Technical Advisory Group set up to conduct this review  |
| <b>Territorial (Local) Authority (TLA)</b>                          | A city council or a district council named in Part 2 of <a href="#">Schedule 2</a> of the Local Government Act.   |
| <b>TPK</b>  | Te Puni Kōkiri  |
| <b>Unitary authority (Council)</b>                                  | A territorial authority that has the responsibilities, duties, and powers of a regional council conferred on it.  |

## Appendix 7: Secondary matters

In the course of this review, the Technical Advisory Group were made aware of a range of more secondary matters that are not specifically dealt with in this report. The most material of these are listed here (in no particular order). They may be usefully considered as part of future work.

1. **White Island.** For White Island and a number of other offshore islands, the Local Authority is the Minister of Local Government by default. As these islands are not within any territorial local authority boundaries, this can create an issue for resourcing response activities.
2. Variation in **geographic boundaries of response agencies** – the difference in boundaries (Fire and Emergency New Zealand, Police, CDEM Groups, Rural support etc.) can create confusion and require multiple points of liaison.
3. Administrative restrictions - under standing orders (Local Government Act 2002) a **CDEM Group can't make a decision without physically meeting**, adding cost and time.
4. **Liability** of council chief executives due to the fact that they employ CDEM staff and have PCBU ('person conducting a business or an undertaking') responsibilities. Submissions also raised liability of Controller decisions.
5. Confusion over responsibilities for **animal welfare and rescue** (including companion animals) and respective roles.
6. The relationship between **state of emergency declaration and insurance policies** – noting the variation in policies and practice. Business continuity insurance was particularly raised.
7. Review of the **financial arrangements** by which response and recovery costs are covered and reimbursed.
8. A **number of recovery matters**, including dealing with land affected by events and increasing the hazard risk, but the associated buildings remained structurally sound.
9. Multiple agencies involved in provision of **temporary housing**, with a potential for confusion and/or reduced efficiency.
10. Need for **business continuity planning** generally.
11. Better **privacy / information sharing protocols** for collecting and sharing personal information during an event.

**TITLE: Coordinating Executive Group Chairpersons report**

**To:** Coordinating Executive Group Meeting, 6 March 2018

**From:** Tony Phipps, CEG Chairperson

**Date:** 20 February 2018

---

**Executive summary:**

This report provides an overview of matters relevant to the CEG Chairs functions.

---

**Recommendations:**

1. That the report 'Coordinating Executive Group Chairpersons report' by Tony Phipps, CEG Chairperson, dated 20 February 2018 be received.

---

**Executive Summary:**

**Warnings and activations**

There have been several weather watches and warnings issued in the past months.

On 23 January at 10.52pm MCDEM issued a National Advisory after a magnitude 8.0 earthquake in the Gulf of Alaska. MCDEM and the National Science Advisors assessed the situation and at 12.15 am on 24 January a No threat to NZ advisory was issued. This event was monitored and information disseminated in the Northland region in accordance with standard operating procedures.

Overnight 12 and 13 February 2018, high intensity short duration rainfall (up to 20mm per hour in some places) occurred in eastern parts of Northland. No Metservice warning had been issued, although on the morning of 13 February a warning for severe rainfall in eastern parts of Northland was issued. 40 to 60 mm of rain had accumulated in some places, and totals for a 12-hour period reach up to 85mms. Due to rainfall in some catchments earlier in the week some flooding occurred. The situation was closely monitored, regular updates were circulated to key agencies. Of note is that in February 60-100mm is a usual amount of rainfall but by the 14 February the Far North, Eastern Hills had already had 250-300mm of rainfall.

Ex Tropical Cyclone Gita was widely reported in the media. No significant impacts occurred from this weather system for Northland. Seven separate districts in the lower North and upper South Islands declared emergencies in anticipation of the impacts of the weather event.

### **Resilience Fund**

The Director of MCDEM has advised that at the end of last year the 2018/2019 Resilience Fund application process was carried out and the approved projects were allocated funds to carry out the proposed work.

For the 2018/2019 Resilience Fund nine applications for a total of \$1.05 million were received and approval of projects to a value of \$767,470 was granted, leaving unallocated funds of \$121,530. MCDEM are now seeking applications for the un-allocated funds and an application has been made to support Recovery management in the region.

### **Strengthened Shared Services**

At the December 2017 meeting the group resolved that the delivery of CDEM services by the four contributing councils be through a fully integrated strengthened shared service model. The FNDC has agreed to this proposal and the details of a shared services arrangement is now being finalised.

In addition, progress has been made to review and streamline on call arrangements for the CDEM Duty Officer and PIM. A controller's workshop is planned to review controllers on call rostering.

At the same meeting, the group asked for a report on the introduction of a regional rate to fund CDEM services for the region. Initial discussions indicate that a regional rate is feasible, and that there are three potential rating formula that could be used. To establish the regional rate consultation would need to occur during the next council Annual Plan round and provided the proposal was accepted introduction would occur in the 2019/20 financial year.

### **Recovery**

The NRC is progressing the appointment of a Group Recovery Manager with the recruitment process well underway. Applications for this position close on 7 March. An appointment should be made before April.

The Northern CDEM Alliance, made up of Northland, Auckland, Waikato and Bay of Plenty planned Recovery Workshop on 22 February, where MCDEM officials were to provide an overview on the new Strategic Recovery Guideline had to be postponed. A new date is being scheduled.

As the Group may recall, MCDEM issued a draft of the Strategic Recovery Guidelines late last year and asked for feedback. The Northland CDEM Group and other groups provided feedback indicating that the content of the guideline was particularly onerous and had the potential to create a work programme that was unrealistic and potentially focused upon areas of work that would be unlikely to add value to recovery in a practical sense. The final guideline "Strategic Recovery Guideline" was released by the Ministry on 6 December 2017.

**ITEM: 5.0**

Page 3 of 4

The new legislation requires that by 1 June 2018 the Northland CDEM Group updates its CDEM Group plan to include a section on Strategic Recovery planning.

Sections 56 and 57, CDEM Act provides:

***Section 56 Review and amendment of civil defence emergency management group plans***

*(1) If a civil defence emergency management group plan has been operative for 5 years or more and it is more than 5 years since the plan has been reviewed under this section, the Civil Defence Emergency Management Group concerned must review the plan.*

*(2) A Group may at any time review any civil defence emergency management group plan made by it.*

*(3) Following a review, the Group may amend or revoke and replace the plan or leave the plan unchanged.*

*(4) A review under this section is commenced by a proposal notified in accordance with [section 52](#), and [sections 49](#), [51](#), and [55](#) apply to that review with any necessary modifications.*

***Section 57 Minor changes to plan***

*(1) Subject to subsection (2), a civil defence emergency management group plan may be amended by the Civil Defence Emergency Management Group concerned without a review of the plan under [section 56](#).*

*(2) A plan may be amended under this section only if the Group is satisfied that the amendment will have no effect or no likely effect on the rights of any person and no effect or no more than a minor effect on the obligations of any person.*

*Changes to the plan that are proposed to reflect the Recovery Strategic recovery will not be contrary to subsection 2 above and the decisions as to whether the change the plan under section 57 rests entirely with the CDEM Group.*

(Horizons Manawatu has agreed to use the Section 57 provisions to amend its current plan).

If the criteria in section 57(2) are applied then the proposed changes to include Strategic Recovery are no more than a Minor change.

**MCDEM Documents**

MCDEM have released a series of Fact Sheets and Quick guides on declaring a state of local emergency and giving notice of local transition period. The documents follow on from a Webinar for Mayors and other documents relating to declarations being made available by MCDEM in late 2017.

**National meetings**

On 6 December, the National Controllers Forum was held in Wellington. Due to other commitments, a Northland representative was unable to attend. The National CDEM

**ITEM: 5.0**

Page 4 of 4

Managers Forum is scheduled to be held in Wellington on 19 and 20 March. And a Northern Alliance CDEM Managers meeting is planned for Tauranga 13 and 14 March.

**Title:** CDEM Manager

**Date:** 20 February 2018

**TITLE:**           **Review of CDEM Group Membership**

**To:**               Coordinating Executive Group Meeting, 6 March 2018

**From:**           Graeme MacDonald, CDEM Manager

**Date:**           19 February 2018

---

### **Executive summary**

At the December 2017 meeting the CDEM Group asked for an outline on the Terms of Reference of the Group along with the responsibilities of the members under Standing Orders.

The s.17 a review of Northland CDEM Arrangements carried out in mid-2017 also alluded to the need for a review of the membership of the Group Committee to confirm that the level of membership is appropriate and at a senior enough level to ensure the function has suitable profile, leadership and commitment.

The purpose of this report is to outline background information on the agreed arrangements for membership of the Northland CDEM Group, the legislative requirements and details of the Northland CDEM Group Establishment Agreement.

---

### **Recommendations**

1. That the report Review 'CDEM Group Membership' by Graeme MacDonald, CDEM Manager and dated 19 February 2018, be received.
2. That the CDEM Group members formally report back to their respective councils the content of the report.
3. That each member formally appoints and notifies the appointment of an alternative who will attend in the event that the appointed representative is unavailable.

---

### **Background**

The Civil Defence Emergency Management Act 2002, sections 12 - 24 sets out the requirements to establish CDEM Groups.

Section 13 specifically deals with membership, subsection (4) provides;

*"Each local authority that is a member of a Group with other local authorities must be represented on the Group by 1, and only 1, person, being the mayor or chairperson of that local authority or an elected person from that local authority who has delegated authority to act for the mayor or chairperson."*

The Northland CDEM Group was formally constituted in March 2002 and an establishment agreement formalised in June 2003 pursuant to the requirements of the Act. The Mayors and Chief Executives or Chair of the four councils that make up the Northland CDEM Group

signed an Establishment Agreement to formalise and confirm the administrative arrangements of the group.

The following are extracts from the Establishment Agreement;

- 6.3 *The members of the Group will be the Northland Regional Council and the following territorial local authorities: Far North District Council, Kaipara District Council, and Whangarei District Council. Each member is to be represented on the Group by one person only, being the mayor/chairperson of that local authority or an alternate representative who has been given the delegated authority to act for the mayor/chairperson.*
- 6.4 *Each member shall also appoint an alternate representative to act in the absence of the representative appointed under 6.3 above. An alternate representative must be an elected person from that territorial authority or regional council under section 13(4) of the Act.*
- 7 REPRESENTATIVES TO HAVE FULL DELEGATED AUTHORITY**
- 7.1 *Each member agrees to confer full delegated authority on its representative and alternate representative on the Group to exercise the functions, powers, and duties of members under the Act.*
- 7.2 *At meetings of the Group each member's representative is to have full authority to vote and make decisions on behalf of that member without further recourse to that member.*

Regarding meeting quorums at Joint Committee meetings, the Establishment Agreement provides;

*18.3 The quorum shall consist of four members.*

### **Discussion**

Over the past 16 years, the membership of the Northland CDEM Group has been made up of elected representatives given the delegated authority to act for the mayor/chairperson. An exception to that has been the Whangarei District Council Mayor who has been that council's representative for the past 4 years.

Across CDEM Groups nationally there is a mix of approaches to membership of CDEM Group joint committees. The varied approaches meet differing regional needs, with differing levels of success.

The Northland CDEM Group Monitoring and Evaluation report 2014, completed by MCDEM made favourable comments about the governance of the group. The score for Governance was 89.3 (up from 67.1 in 2010). The 2014 report commented *"There is a clear and evident culture of cooperation and collaboration in Northland. Roles and responsibilities are understood, and largely given effect."*

**ITEM: 6.0**  
Page 3 of 3

The recently released Ministerial Review also commented upon Regional CDEM arrangements recognising that Capability of groups is very mixed. One of the recommendation made was to strengthen group governance and accountability.

To ensure on-going continuity and surety that there is appropriate representation from each member at CDEM Group meetings a formal alternate appointment should be made.

**TITLE:**           **Roading Network Status Reporting During an Emergency Event and Recovery**

**To:**               Coordinating Executive Group Meeting, 6 March 2018

**From:**           Claire Nyberg, Civil Defence Emergency Management Officer

**Date:**           22 February 2018

---

### **Executive summary**

This report gives an overview of the current roading information processes during an emergency and recovery and makes recommendations to improve the current arrangements.

---

### **Recommendations**

1. That the report 'Roading Network Status Reporting During an Emergency Event and Recovery' by Claire Nyberg, CDEM Officer and dated 22 February 2018, be received.
2. That the Group request the roading controlling authorities to establish mechanisms to ensure real time reporting to specific electronic websites and applications.
3. The Group requests the Territorial authorities (Kaipara, Whangarei and Far North) include in their service level agreements with the Northland Transportation Alliance (NTA) that the NTA is responsible for ensuring the coordination of accurate and timely roading information, during BAU and response to adverse weather events.
4. That the NTA be requested to be actively represented and participate in the Northland Lifelines Utility Coordination (LUC) Group.

---

### **Background:**

Road closures during an adverse weather event have a major impact in Northland and the largest demand for information from communities, businesses and the emergency services is for timely and accurate roading information.

Currently the Northland CDEM Group direct the public to both the New Zealand Transport Agency (<http://www.journeys.nzta.govt.nz/traffic/>) and the AA Traveller (<https://www.aa.co.nz/travel/roadwatch/>) websites.

The roading controlling authorities of these websites rely on information from multiple sources but pre-dominantly from councils, their contractors and from the New Zealand Transport Agency (NZTA) contractors. While local authorities have in general been providing roading information for these websites it has become apparent that some are not providing this information in a timely manner. This was most recently evident during the rainfall event of the 13 February that affected the region.

Through the NTA there is now an opportunity for better coordination and consistency of reporting of roading information across Northland. There are also opportunities to leverage

information from other sources i.e. CDEM were approached recently by Fonterra with regards to utilising their real-time data which tracks tanker movements.

A best practice example of a Lifeline Utility agency providing up to date information to customers, is shown by the creation of Top Energy's interactive map (<https://outages.topenergy.co.nz/>). Customers can type in their address to find information about the extent of the power outage affecting them and the estimated time of restoration. This is used during BAU and during emergencies. Efficiencies of the website include a reduction in the number of calls required to call centre staff to provide customer information on power outages and restoration times.

### **Legislation**

Under Schedule 1 Part B (6) of the CDEM Act (2002) a Lifelines Utility is an entity carrying on a certain business, such as a roading network (including State Highways). The NTA is a Shared Services Business Unit (SSBU) consisting of Alliance Partners; Far North District Council (FNDC), Whangarei District Council (WDC), Kaipara District Council (KDC), Northland Regional Council (NRC) and the NZTA. The purpose of the NTA is to provide a collaborative initiative aimed at improving the efficiency and effectiveness of transportation infrastructure, planning, management and delivery across the Northland region. This should include the coordination and reporting of accurate and timely roading data during BAU and response. However local authorities still retain their obligations under Section 64 of the CDEM Act (2002).

Under the new arrangements, the NTA as a SSBU should provide representation and participate in the Northland Lifelines Utility Coordination Group as per Section 60 – Duties of Lifelines Utilities under the CDEM Act (2002).

**TITLE:**           **Community Resilience Projects**

**To:**                Coordinating Executive Group Meeting, 6 March 2018

**From:**           Shona Morgan, Community Resilience Coordinator

**Date:**            20 February 2018

---

### Executive summary

This report will outline community resilience projects carried out in Northland in the last 3 months.

---

### Recommendation

1. That the report 'Community Resilience Projects' by Shona Morgan, Community Resilience Coordinator and dated 20 February 2018 be received.
- 

### Report

#### Community response groups

There has been a decrease in engagement over the last 3 months with a drop in the number of groups that are fully engaged.

**November 2017**

**February 2018**

The Northland CDEM Group will be holding a workshop in due course to review the delivery and expectations of the community response groups. This process will look at the barriers and successes of community response planning in Northland as well as other areas, which will help to adopt a more focused approach in the future.

#### Youth in emergency services (YES) programme

Three meetings have been held in Mangonui and recruitment for participants is well under way. The dates for the programme are below:

| <b>Session</b>                                | <b>Date</b>                        | <b>Time</b> |
|---|------------------------------------|-------------|
| <i>Induction and Day 1 Fire and Emergency</i> | <i>19 May</i>                      | <i>0800</i> |
| <i>Day 2 Red Cross &amp; St John</i>          | <i>26 May</i>                      | <i>0800</i> |
| <b><i>Queen's Birthday Weekend</i></b>        | <b><i>2 June</i></b>               |             |
| <i>Day 3 Police and Surf Rescue</i>           | <i>9 June</i>                      | <i>0800</i> |
| <i>Final Combined Exercise</i>                | <i>16 June</i>                     | <i>0800</i> |
| <i>Graduation Dinner</i>                      | <i>Friday 22<sup>nd</sup> June</i> | <i>6pm</i>  |

A formal application has been made to the Ministry of Youth Development to obtain Level 3 Accreditation which is needed before the funding for the YES programme can be received.

### **Electronic Community Response Plans (eCRP's)**

All current eCRP's have been updated with the following information:

- New tsunami evacuation maps including a new quick link [www.nrc.govt.nz/evacuationzones](http://www.nrc.govt.nz/evacuationzones)
- Updated logo, websites and contact details for Fire and Emergency New Zealand
- Updated Northland Regional Council logo
- Updated Coastguard channels
- New information about alerting including Red Cross Hazard App and Emergency Mobile Alerts
- Updated website details for the MCDEM

The 40 eCRP's currently on the website will be removed and replaced with the updated plans in due course.

### **GIS Situational Viewer**

Work is still being carried on a situational awareness viewer that will publish live feeds from a number of sources during an event. Currently data has been obtained from NZTA, Top Energy and Metservice. Northpower are also developing a live feed for their outages which is progressing well and will be included in the coming weeks.

### **Attendance at Meetings and Training**

AUT Post Graduate Diploma – Disaster Risk Communication  
CDEM 101 Training at Ministry of Social Development – Whangarei  
Auckland Welfare Managers meet and greet – Warkworth  
YES Mangonui 3 x Meetings – Mangonui Fire Station

**TITLE: Professional Development and Training**

**To:** Coordinating Executive Group Meeting, 6 March 2018

**From:** Kim Abbott - Emergency Management Officer

**Date:** 23 February 2018

---

**Executive summary**

This report is an outline of the professional development undertaken by the Northland Civil Defence Emergency Management (CDEM) team, both externally and internally.

---

**Recommendation**

1. That the report 'Professional Development and Training' by Kim Abbott- Emergency Management Officer, dated 23 February 2018 be received.

---

**Report**

This quarter is traditionally quiet for the Northland CDEM team. It is an opportunity to develop the training program for the year ahead.

**CDEM team professional development and working groups:**

The following is an outline of the training, courses, forums and seminars that have been attended by members of the Northland Civil Defence Team in recent months:

- CDEM workshop (Full CDEM team Kerikeri)
- NDHB exercise (Kim Abbott, Victoria Randal, Shona Morgan and Claire Nyberg)
- Internal Auditing Refresher (Claire Nyberg)
- Continuous Improvement training (Claire Nyberg)
- Red Cross Hazard app/CAP/Emergency Mobile Alerts working/steering group (Murray Soljak)
- North Island WENIRP workshop (Murray Soljak)
- Victoria Randall has resigned from National EMIS User Group and the National EMIS Governance Group to which she has been a valuable member for 5 years.
- Red Cross Psychosocial First Aid Training (Susan Botting)
- EMIS mini desktop exercise (All EMIS users facilitated by Victoria Randall)

### External Continued Learning

- Congratulations to Victoria Randal has completed her Post Graduate Diploma in Emergency Management and attended the graduation in December
- Shona Morgan is completing her final paper at AUT – Post Graduate Diploma in Emergency Management – Disaster Risk Communication.
- Tegan Capp has been accepted in Massey University and will be studying a Diploma in Arts - Emergency Management
- Susan Botting and Tegan Capp have enrolled in the Te Wananaga o Aotearoa Certificate in Te Reo – Papa Reo.

### CDEM Training Pathway.

The training calendar has been finalised for 2018 with Gerard Moore as the primary external trainer based within Fire Rescue and First Response Ltd (FYRBOS). At the time of writing both March courses look to be fully subscribed.

| <u>March</u>    | <u>June</u>     | <u>September</u>  | <u>November</u> |
|-----------------|-----------------|-------------------|-----------------|
| 20-21 CIMS4     | 19-20 CIMS4     | 24 EOC Training   | 13-14 CIMS4     |
| 22 EOC Training | 21 EOC Training | 25-26 CIMS4       | 15 EOC Training |
|                 |                 | 27 EOC Exercise   |                 |
|                 |                 | 28 CIMS Refresher |                 |

**TITLE: Public Information Management (PIM) Update**

**To:** Coordinating Executive Group, 6 March 2018

**From:** Murray Soljak, Public Information Manager and Susan Botting, Public Information Officer

**Date:** 22 February 2018

---

**Executive summary**

This report summarises key developments in public information management since the previous meeting.

---

**Recommendation**

1. That the report 'Public Information Management (PIM) update' by Murray Soljak, Public Information Manager and Susan Botting, Public Information Officer and dated 22 February 2018 be received.

---

**Emergency Mobile Alerts:**

The Emergency Mobile Alert system has had its first 'live' use: NZ Police sent a series of alerts and updates in the early hours of 18 February to advise some Taranaki residents to shut all doors and windows and stay inside following a serious ammonia leak at a factory. A second, separate alert was subsequently sent in Buller District during ex-Tropical Cyclone Gita.

The Emergency Mobile Alerts system will be used by MCDEM and CDEM Groups nationwide (including Northland), along with Fire and Emergency New Zealand, New Zealand Police, the Ministry for Primary Industries and the Ministry of Health when there is a serious risk to life or property.

Northland CDEM's on-call officers have all been trained in the use of the system.

A working group continues to steer the ongoing development/improvement of the system, including refinements to standardised templates. This is being co-ordinated with a similar development group for the (unrelated) Red Cross Hazard app.

**Media/social media:**

Recent weather events (including those which proved to have little or no effect on Northland) and the potential tsunami threat following the Gulf of Alaska earthquake on 24 January 2018 have been the main catalysts for media enquiries and traffic to the Group Facebook page.

The Gulf of Alaska earthquake/tsunami post had a cumulative audience of more than 56,500.

**ITEM: 10.0**

Page 2 of 2

**Reinforcing 111:**

Following a recent Facebook post from a Far North resident regarding a flood at his Kaeo property (which in turn led to limited media coverage), steps have been taken to highlight the fact that dialling 111 is the way to access emergency assistance. This has included additional content in the About section of the Group Facebook page and proposed changes to the Emergency Services pages of the hard-copy phone directory for Northland.

**Northland Civil Defence eNewsletter**

Northland Civil Defence is now publishing a new electronic newsletter. The eNewsletter assists with keeping subscribers up to date on relevant Civil Defence matters. It is distributed to the Northland Civil defence community and those interested in it.

Topics covered in the first eNewsletter (December 2017) included NIWA summer climate outlook, emergency mobile altering and Onerahi (Whangarei District Council) and Mitimiti (FNDC) community response groups. Topics covered in the second eNewsletter include the emergency management industry review, Northland Civil Defence Forum and Kaiwaka Community Response Group (KDC).

**TITLE:** Welfare Coordination Group update

**To:** Coordinating Executive Group Meeting, 6 March 2018

**From:** Claire Nyberg, Civil Defence Emergency Management Officer

**Date:** 22 February 2018

---

### **Executive summary**

This report gives an update on the activities of the Welfare Coordination Group (WCG).

---

### **Recommendation**

1. That the report 'Welfare Coordination Group update' by Claire Nyberg- Civil Defence Emergency Management Officer, dated 22 February be received.
  2. That the '2018 Welfare Coordination Group Work Plan' be received.
- 

### **Background:**

The **first WCG meeting of the year** which was to be held on 2 March 2018, **was cancelled** due to a number of key agency representatives being unable to attend. In all instances, as part of business continuity arrangements, agencies that sit on CDEM committees should have representatives that can attend meetings during readiness. The Group Welfare Manager will follow up with letters and appointments to meet agency CEO's to ensure better representation at future meetings.

The draft 2018 WCG work programme which was to be approved at the March meeting is attached to this item. The priorities in 2018 are:

- Provide strategic direction for the WCG and welfare function through appropriate planning and engagement of welfare service agencies ensuring capacity, capability, roles and responsibilities are clearly articulated in planning documentation;
- Review, update and create key documentation such as induction material, action plans, MOU's and individual agency plans;
- Review Civil Defence Centre (CDC) arrangements, documentation, training and exercising;
- Assess and deliver training and participate in exercises;
- Ensure member agencies are engaged and resilient with each agency giving a yearly presentation/update at a WCG meeting;
- Development of plans around each of the nine Welfare sub functions.

### **Training and meetings**

**Psychosocial First Aid training**, facilitated by the NZ Red Cross and funded by the Ministry of Health, was held on 19 Feb. Psychological First Aid (PFA) builds the capacity of people who

**ITEM: 11.0**

Page 2 of 2

support and assist affected people shortly after a disaster or any other traumatic event. A number of WCG members attended the training.

The **Introduction to Civil Defence** was delivered to MSD managers on the 15 February. The presentation was followed by a workshop for managers to go through four scenarios to determine current levels of business continuity and personal preparedness. MSD are assessing the presentation and whether or not by their own trainer to deliver this to their regional and Whangarei based staff.

The presentation was also delivered to the Northland District Health Board (NDHB) and BUPA services in December 2017.

A **meeting** was held with some **CDEM staff and Red Cross representatives**, including their recently appointed Disaster Risk Manager- Angela Sutherland. Ms Sutherland gave an update on Red Cross national work priorities and took away examples of work that Northland has completed on Business Continuity Planning, marae preparedness and vulnerable groups.

#### **Resilience Fund for Welfare Tools**

In 2016 the Northland CDEM Group received \$40,000 (half of the funds applied for) from an application to the MCDEM's Resilience Fund and in 2017 received the extra \$40,000 to complete the project. The purpose of the project is to:

- facilitate the improvement of welfare planning and management across NZ;
- to develop a sector driven programme designed to address the current gaps that have been collectively identified by CDEM Groups; and
- develop practical tools that will assist CDEM Groups to implement welfare arrangements.

Work is being completed on the practical tools which are being reviewed and uploaded to EMIS this will allow Group Welfare Managers to download and adapt the tools for their own regions. This project finishes on 30 June.

# NORTHLAND WELFARE COORDINATION GROUP WORK PROGRAMME 2018

DRAFT

Northland Civil Defence Emergency Management Group "Resilient Communities Together"

# 1 INTRODUCTION

---

Welfare response is a coordinated action undertaken by government and non-government agencies and organisations to ensure individuals, families and whānau and communities affected by an emergency are supported to cope with the event in the best possible way under the circumstances.

Successful delivery of welfare support depends on the ability of agencies to work together in a coordinated effort. This is achieved through agencies prior to an event having an understanding of risks and community vulnerabilities and having built relationships in order to adequately reduce, prepare for, respond to and be able to recover from the event.

Welfare delivery in Northland is coordinated by the Welfare Coordination Group (WCG). This group works across the 4R's of Civil Defence and Emergency Management (CDEM) to establish community resilience. A work plan is created yearly by the WCG members to prioritise projects.

## 1.1 Plan purpose

---

This document has been created with the purpose of planning and coordinating the activities of the WCG for Northland over the 2018 calendar year. The Plan will be reviewed every year to reconfirm the WCG activities and priorities.

## 1.2 PRIORITIES

---

Priorities for the 2018 calendar year as set by the WCG and the Group Welfare Manager are listed below and are discussed in more detail in appendix 2 and 3. The priorities for 2018 are:

- **Provide strategic direction for the WCG** and welfare function through appropriate planning and engagement of welfare service agencies ensuring capacity, capability, roles and responsibilities are clearly articulated in planning documentation;
- **Review, update and create key documentation** such as induction material, action plans, MOU's and individual agency plans.
- **Review Civil Defence Centre (CDC)** arrangements, documentation, training and exercising;
- **Assess and deliver training and participate in exercises;**
- **Ensure member agency is engaged and resilient** with each agency giving a yearly presentation/update at a WCG meeting.
- **Development of plans around each of the 9 Welfare sub functions.**
- **Host the Group Welfare Managers forum in May.**

Occasionally there may be a need to add or re-prioritise items identified in the work programme. When this occurs, these changes will be communicated to WCG and to the CEG/CDEM Group members. An example of a change of priorities would occur from a corrective action plan following a response or from unidentified national priorities which require group level input or action.

## Continuing work programme activities

There are a number of activities which continue from year to year (see appendix 1):

- Coordinate meeting dates and venues, attendance at meetings, preparations of agendas, minutes, arranging guest speakers, activities and presentations;
- Ensure an up to date contact list is completed and distributed to members frequently;
- Undertake reviews of the Group Welfare Plan, Terms of Reference and the work programme, as programmed;
- Provide induction to any new WCG members;
- Prepare an agenda item for the meetings of the Coordinating Executive Group (CEG) and the Northland CDEM Group;
- Represent the WCG through engaging in developing Ministry of Civil Defence and Emergency Management plans and guidelines;
- Attend the National Group Welfare Managers Forum(s);
- Engage with the National Welfare Coordinator on a regular basis and distribute National Welfare Coordination Group (NWCG) meeting minutes;

## Reporting

---

The WCG work programme will be reported on quarterly at WCG meetings and during the reporting periods Northland WCG members will have the opportunity to discuss progress on projects and reprioritise if required. The WCG Chair will include the finalised WCG work plan at the first CEG meeting of the year and report on yearly progress at the final CEG meeting for the year.

## Developing the 2018 year work programme

---

Activities for the work programme for the 2018 calendar year will be workshopped at the final meeting for the 2017 year. The activities which WCG members put forward will prioritised and confirmed at the first meeting of the WCG in the 2018 year.

## Appendix 1 Yearly work programme

The activities in this yearly work programme will be undertaken by the Group Welfare Manager(s) on behalf of the WCG over the calendar year.

| Project/Topic  | Tasks/Actions  | Comments   |
|--|--|--|

**TITLE:** Kaipara District Update

**To:** Coordinating Executive Group Meeting, 6 March 2018

**From:** Sharon Douglas, Civil Defence Emergency Management Officer

**Date:** 16 February 2018

---

### **Executive summary**

This report provides an update of the Civil Defence Emergency Management activities within the Kaipara District over the past 3 months.

---

### **Recommendation**

1. That the report 'Kaipara District Update' by Sharon Douglas, Civil Defence Emergency Management Officer, dated 16 February 2018 be received.

---

### **Response**

#### **Aranga Maunganui Bluff – Rock Fall Risk**

Contractors engaged by EQC stabilised the area of Maunganui Bluff, Aranga, threatened by large boulders following a slip in September 2017. Dangerous Building Notices issued by Kaipara District Council, under section 124 of the Building Act were lifted on the 20 December. The section of road closed and Department of Conservation Track were also re-opened to public.

### **Readiness and Reduction Projects:**

#### **Monitoring**

The emergency operation centre was not required to activate for this period. Weather events tsunami alerts were all monitored.

#### **Community Response groups**

Planning is underway to host a training day for community response group members in the Kaipara District. This one-day workshop will focus on "Encouraging community resilience and preparedness" and "Response; what do we do now?" The workshop will enable groups to share ideas, assist in identifying neighbouring group representative and with review of current group plans.

### **Kaipara District Council:**

The new Mayor Jason Smith will be sworn in on Friday 23<sup>rd</sup> of February.

**ITEM: 12.0**

Page 2 of 2

During this period, a restructure of staff has occurred. Key appointments are still to be made including chief executive. Civil defence emergency management induction will be offered to new staff. Kaipara District Council continue to have staff attending training including - CIMS4, psychosocial first aid and key meetings.

**Other CDEM Activities**

- Attendance at the Coordinating Executive Group and Northland Civil Defence Emergency Management Group meeting December 2017
- Attendance at Civil Defence Officers monthly meetings
- Northland Emergency Services co ordinating committee meetings
- Attendance at lifelines meeting
- Northland Civil Defence workshop

**TITLE: Far North District Update**

**To:** Coordinating Executive Group Meeting, 6 March 2018

**From:** Bill Hutchinson, Civil Defence Team Leader

**Date:** 21 February 2018

---

**Executive summary:**

This report provides an update on the Civil Defence and Emergency Management activities within the Far North District over the past three months.

---

**Recommendations:**

1. That the report 'Far North District Update' by Bill Hutchinson, Civil Defence Team Leader, dated 21 February 2018 be received.

---

**Report:**

**Readiness Activities**

- A review of the Community Response Plan for Kaitaia is underway. This has been initiated as a result of the Rangitaiki River Scheme Review (April 2017 Edgecombe flood event). We are liaising with the River Management team at the Northland Regional Council to ensure that lessons learnt from this event are identified. Key outcomes will be to ensure that triggers for evacuations if required are identified, there is clarity around roles and responsibilities with stakeholder groups and there is public awareness and understanding of the risks associated with flooding from the river network in Kaitaia,
- Review of Community Response Plans for Karikari Peninsula and Kawakawa
- A full test of IT equipment for the councils emergency operations centre was carried out on 19 February. Some minor issues were identified and have been addressed.
- A briefing involving council CDEM staff, infrastructure managers, emergency services and Top Energy was held at the Far North District Council on Friday 16 February in preparation for the lead up to Cyclone Gita.
- In house staff briefings for council departmental team meetings covering local and regional arrangements and duties of local authorities under the CDEM Act 2002.
- Emergency planning with Top Energy for Ngawha Geothermal Power Station

**National Warning System (NWS) and Event Monitoring**

- National Warning System - 8 December 2018 (Test)
  - 23 January (Tsunami Advisory)

**ITEM: 13.0**

Page 2 of 2

- Severe Weather Warnings - 4/5 January 2018
  - 17/18 January 2018
  - 9 January 2018
  - 20 February 2018 (Cyclone Gita)

**Attendance at Meetings and Professional Development**

- Youth in Emergency Services Program (Mangonui)
- CDEM and CEG Meetings
- Northland Welfare Coordination Group
- Civil Defence Officers Group
- EMERGO Exercise (Kaitaia)
- CDEM Controllers Program

**TITLE:** Whangārei District Update

**To:** Coordinating Executive Group Meeting, 6 March 2018

**From:** Victoria Randall – Civil Defence Emergency Management Officer, Whangareī District

**Date:** 19 February 2018

---

### **Executive summary**

The purpose of this report is to update on the CDEM activities within the Whangārei district over the last three months.

---

### **Recommendation**

1. That the report 'Whangārei District Update' by Victoria Randall, CDEM Officer, Whangārei District, dated 19 February 2018 be received.
- 

### **Background:**

#### **Reduction of Hazards**

Council's land developer and building consent processes, the District Plan Coastal Hazards review, Land Information Memorandum (LIM) and GIS hazards layers are all being assessed against the reduction of tsunami hazards in the Whangareī district. From this assessment and number of tsunami hazard reduction projects will be formed.

#### **Tsunami Tools**

There are 12 new outdoor tsunami sirens scheduled for installation within the Whangareī district before the next tsunami siren testing. The locations are:

- Ruakaka – Ocean View Rise / Dune Lake area
- Oakura Beach road (about half way down on the beach front)
- Tutukaka, Pacific Bay (pacific Bay Road)
- Tutukaka, Wellington Bay - Whangaumu Street / Mere Tiaho Lane area
- Tutukaka, Tutukaka Block Road - Church Bay
- Onerahi, Waimahanga Road
- Langs Beach, Halfway down Hector Lang Drive (After Anderson Place)
- Ruakaka, Shopping Centre
- Langs Beach, Junction of Taranga Road and Wairahi Road
- Waipu, Shoemaker Road (Village end)
- Waipu, Settlers View / Nova Scotia Drive area
- Whangareī Heads, Matuku Street / Darch Road area

The indoor tsunami sirens are scheduled to be available from late March 2018. The build of the 100 sirens awaits the blue light part delivery from the UK. A customer instruction sheet is being developed and each siren will be identified by a sticker and serial number applied to each siren. Sirens will be available to buy from the reception at the Whangareī branch of the Northland

**ITEM: 14.0**

Page 2 of 2

Regional Council. Customers will need to have a discussion with a civil defence officer or reception staff regarding the siren use and care prior to taking the unit away. All sirens will be tracked for warranty and identification purposes. Advertising of the availability of the indoor sirens will be carried out by the Northland CDEM Group office.

Locations have been chosen for the next round of tsunami information boards across the district. There are 39 locations identified for board installations. Liaison with Community Response Groups, final locations and all land permissions required for installation have been confirmed.

Mapping each location, inserting maps into the template and coordinating installation with council contractors are the next steps. This project should be completed by the end of July 2018.

*Tsunami siren testing falls next at the end of daylight saving 1 April 2018. This date is also Easter Sunday. Testing will be held at a different time to usual - at 12pm for 10 minutes and again at 12.30pm for 30 seconds to allow Easter Sunday faith services to take place before testing.*

**Contact Database for Warnings**

The CDEM contact databases held at the WDC, used for warnings and use in the emergency operations centre, will be transferred to existing contact databases at the NRC.

This is part of a wider project to strengthen the CDEM shared service arrangements across the region.

Future warnings will be sent from one central source out region wide. Contacts will be maintained from one central source and several CDEM staff members of the WDC will be granted permission to access the contact groups at the NRC.

**Other Activities**

Council CDEM training and staff development programme for 2018 has been completed and distributed. External agencies have also been supported:

- Northland District Health Board Exercise Dec 2017
- Fire and Emergency New Zealand Exercise November 2017.

Compiling and distributing February's EMIS mini exercise to Northland EMIS users.

**Reporting and Meetings attended**

Professional Development and 2018 work programme meeting with Graeme MacDonald

Council Community Development Committee monthly meetings

Council Community Group, Department Managers weekly meetings

Monthly Operational reports for Community Development Committee

Local Controllers meeting and mini weather exercise

Civil Defence Officers meetings December, January, February.
